Speaker for August 18th, 2019

Dr Vishal Sharma

- Ayurveda -

Dr Vishal Sharma is an Ayurvedic Doctor based in Sydney, Australia. He comes from Himachal Pradesh where all the Ayurvedic herbs come from.

Ayurveda is an ancient wisdom of holistic healing and prevention dating back well over 6000 years. The philosophy is to work on the root cause of the disease and maintain optimal health.

Dr Sharma treats all Chronic Diseases like Arthritis, Fibromyalgia, Huntington Disease, Chronic Fatigue, Digestive disorders such as Crohn's Disease, Irritable Bowel Syndrome, Obesity, Stress, Anxiety, Depression, Insomnia, Musculoskeletal disorders including Chronic Back pain, Sciatica, Migraines, Allergies, Sinus, Hair loss etc. I treat all diseases with herbs, lifestyle adjustments, detoxification/ Panchakarma, yoga and meditation by Enhancing the Immunity whilst Rejuvenating the Body.

Topics covered:

- What is Ayurveda?
- Why Ayurveda is Important?
- Importance of Digestive fire/ Metabolic functions
- How diseases manifest in the body
- Prevention and Therapies outline
- Tips to stay healthy

From the Editor

From my work desk, looking above my computer monitor, I can see the trees in the garden. One of them is a magnolia tree. It has no leaves but hundreds of beautiful red and white flowers. What an effort it must be to forsake feeding through its leaves to create this magnificent display of flowers.

Yet if I keep my focus on my screen I will not see it, I will not marvel and I will not enjoy it. The choice is mine. You will find several articles in this newsletter about luck. Is luck set, so either you have some or not? Or is it that you make your luck by being aware. We have a choice, we can find all the things we can be grateful for, or feel miserable for our predicament.

I recently had what I would call a '*bare minimum*' experience. I was lying on my hospital bed in the middle of the night, unable to sleep or move.

My mind was still, there was no noise and nothing happening. Searching for something to focus on, I realised that I could hear my breath, so I focused on that. I felt greatly comforted and grateful to be alive. So when nothing else is in the way I can discover what is at the core. It is always there, like the tree in the garden, but I need to choose to focus on it.

We also have a number of articles this month about the effects of noxious energies. They are quite easy to detect, and avoiding them will save you quite a few problems as seen in Kate Bachler's article. It will be much harder when the 5G network kicks in. It is using quite a different system from any other electromagnetic device, where the antennas target the receiver directly. I am yet to understand how it works, and that will be needed if we want to protect ourselves from the noxious exposure.

We have our International Dowsing Conference coming on the horizon. I hope that, like me, you have registered, and if not please hurry. I know the spaces are limited, so do not miss out.

Until next time,

François

Electro-Magnetic Fields: The Invisible Danger

By Don Anderson

Reprinted from the American Society of Dowzers, Spring 2019

How would you like to be part of a worldwide experiment to test the health effects of a particular technology? The experiment would be designed to test the effects on humans, animals, and plants. The test would be dangerous in many ways and may adversely affect your health.

The test will have no defined end date and may run for many years. If your health is affected, you will be on your own; no funds will be provided for treatment. And, there will be a sizable monthly fee. Finally, there will be no way to opt out.

Would you want to be a part of this? Yet every human being on the planet is now a part of this diabolical experiment. It has been ongoing for many years and has continued to develop over time as technology advances. I am referring to the electromagnetic fields (EMFs) that surround us at an ever-increasing rate. They derive from a variety of sources: electric power lines inside our walls, our cell phones, microwave ovens, Wi-Fi, and many other modern electrical conveniences that we use on a daily basis. And, the threat to our health will continue to grow as time goes by.

Most people are completely oblivious to the threat that they live under. Yet every individual is subject to it at every moment. Last year I attended the graduation of my daughter from graduate school. The ceremony was held in a large stadium used by a professional basketball team that holds 17,000 people. Three-fourths of the stadium was filled. I sat in the front row. As I looked back on the crowd, I saw thousands of people all with their cell phones in hand, snapping pictures.

There were dangerous levels of microwave energy from each phone filling

the building and damaging all of us present.

In January, I travelled to China to visit my son. The plane was filled, not only with people watching entertainment on their phones and tablets connected to the plane's Wi-Fi, but also with microwave energy from all those devices. In Taiwan, I walked the length of the high-speed rail train I was on; it was also filled with people watching entertainment on their Wi-Fi devices. In crowds, we are surrounded by people using their phones. No matter where we go today, it is impossible to escape the electrical fields that fill the environment we occupy.

In the 1950s, when I lived in the Los Angeles area, I remember the smog that filled the air almost daily. When I went out to the playground for recess, my eyes burned and every breath was painful. Sometimes the smog was so thick I could not see the mountains 20 miles away. Today the smog in the air has largely been replaced with the '*electrosmog*' filling the environment.

I could see the smog in the air, yet no one can see this electrosmog, which is increasing every day. Indeed, the government agencies meant to protect us are promoting the spread of this threat.

Our US president recently said that he wants to see the implementation of the new 5G cell phone network as soon as possible. This will bring the danger of microwave radiation even closer to our homes.

How can we then protect ourselves from the damage being caused by this threat? Since no one in government or the communications industry seems to recognize this danger (there is too much money involved), we must all take it upon ourselves to mitigate the levels that we are subjected to. Here are some practical ways we can reduce this danger:

1. Cell phone use:

Our cell phones are powerful microwave transmitters, much like the ones in our kitchens. In fact, when placed against our heads while talking to someone, that is exactly what you are doing-microwaving your head. It is no wonder that brain cancer is on the rise; 50% of the energy from our phones is absorbed by our heads! To reduce this danger, we can use our phones in speaker mode, held away from us: we should never place the phone against our heads. We can also use headphones with the phone held away from us.

2. Cell phone case:

We can purchase a cell phone case with a shielded flap. When holding our phones, we can fold the flap to the back of the phone to protect our hands from microwaves. Also, when carrying the phone in a pocket, bra, or armband, we can place the flap between ourselves and the phone to protect our bodies. If we do not have a case with a protective flap, we should never carry our phones in our pocket or bra or armband unless it is in the airplane mode.

3. Cell phone use in the car:

We can avoid phone use in the car. The energy from the phone is trapped in the car and builds up. It is much more dangerous than using the phone outside. When driving, we can keep our phones in aeroplane mode.

4. Microwave oven:

Beside destroying the nutritive value of food and turning it toxic, microwave ovens also emit dangerous levels of microwave energy. Best not to use it at all; but if you must, leave the room while it is in operation. I repurposed my microwave oven as a cabinet for dishes!

5. Wi-Fi and router:

Wi-Fi is a great convenience, but it is also very dangerous. Wi-Fi energy is pulsed microwave energy, a more dangerous form. It is far better to run

a network wire to our computers if possible.

If we must use Wi-Fi, we can place the router as far away from our living space as possible. I located mine in my garage as far from my living space as I could. I then measured the radiation in my living space; it was negligible but my Wi-Fi devices work fine.

6. Computer keyboard, mouse and printer:

We can avoid using wireless keyboards, mice, and printers. These emit dangerous Wi-Fi energy into our hands and environment. Use a keyboard and mouse with a wire and connect your printer with a USB cable.

7. Cordless phones:

Cordless phones also emit dangerous levels of microwave energy. And, they emit it continuously! We can replace them with corded phones.

8. Light dimmers:

Light dimmers on lamps and on your wall induce ‘dirty’ electricity into the electrical grids that run throughout our homes. The electricity entering our homes from the power company is relatively clean. However, with all of the modern, energy-saving devices we now use, erratic spikes and surges of electrical energy are superimposed upon the clean energy. This dirty energy then radiates throughout our environment. If our lamps have dimmers, we can use them only in the ‘full on’ or ‘full off’ state.

9. Smart meters:

Most homes in the US now have smart meters. These emit microwave energy as they communicate our homes’ energy use to the electric company. If our homes have smart meters, we can contact our energy providers and ask to opt out. They have programs to allow us to replace smart meters with the older analog meters, which are safe to have on our homes.

10. The bedroom:

Our bedrooms are the most important rooms in our homes when it comes to electrical energy. Our bodies detoxify and restore themselves at night while we sleep. Sleep quality is greatly affected by devices radiating electrical energy in a room. Therefore, our bedrooms need to be as ‘quiet’ electrically as possible to be a ‘*sleep sanctuary*.’ Here are some useful guidelines:

- a. No cell phones in the bedroom unless they are in airplane mode
- b. Clock radios at least 10 feet from beds
- c. No Wi-Fi routers, cordless phones, computers, or tablets in the room
- d. No electrical cords or power strips near or under your bed.

The wires in our walls emit electrical energy into rooms, even if things are turned off. If we are able, we can turn off the power to bedrooms and surrounding rooms. We need to identify the circuit breakers that supply power to those rooms and flip them off before bedtime. We might need an electrician to help identify these circuit breakers.

Note: Our rooms may be impacted by our neighbours: their Wi- Fi’s may leak into our homes, affecting our sleep. This is especially true in apartment complexes.

Some of these guidelines may be difficult to determine and mitigate. For this reason, consider contacting a trained Electro Magnetic Radiation Specialist who has the test equipment to help identify the sources of ‘*electrosmog*’ in our environment and make specific recommendations.

We can all take simple steps to help protect ourselves against the onslaught of ‘*electrosmog*’ permeating our environment. These guidelines will help us all make our homes safer.

How to Reprogram your Subconscious

by Rev. Dr. Betsie Poinsett, C. Ht.

Reprinted from the Ozark Research Institute newsletter, Summer 2019

This really isn't as hard as you would think. And thinking is what it is all about!!! Did anyone read 'The Secret' or see the movie? There were many good tips in it about how to use the Law of Repetition, The Law of Attraction, etc. to help change your life. However, they left out a very important ingredient!!! One that I have added so that people will fully understand how to reprogram their subconscious mind.

Let's use this premise - our conscious mind is the everyday thinking mind where our logic and reasoning is located ... this part is 12% of our mind power. Some say that logic + reasoning = willpower.

That thing we never have when we need it to make changes. That is because all of our programs, habits and patterns are stored in the subconscious mind which is 88% of our mind power.

When trying to make changes using only the conscious mind's 12%, it's like 88 horses pulling against 12 horses to make a change using only one part of your brain. To make deep lasting changes in the 88% it always takes 21 days, or repetitions to have the changes fully register in the subconscious mind.

We must have the cooperation of the subconscious. This is the most important ingredient to remember - it takes 21 times or repetitions to make a lasting change in the subconscious mind.

To do this we need to remember that the subconscious is like talking to an 8-year-old child. It needs the 21 days or more of repetitions, it does not hear the word “*no or not*”, and it always thinks it is trying to help you.

When a habit or pattern is in the subconscious - it is just there! It is not positive or negative. Therefore, the subconscious feels very threatened if you try to change.... this is when feelings of fear, sabotage, even the old ‘*fight or flight*’, survival feelings come up, the subconscious is trying to protect you from making any changes. Plus, it is like talking to a child.

In order to make changes on your own - you must take ‘*baby steps*’ and keep things simple. Do not try to change several things at once that will only confuse the subconscious. Stay with one thing at a time.

Decide what you want to change, write it down, and look at that statement every day. Remember to write it in a positive way. If you say: “*I will NOT eat that chocolate cake.*”

The subconscious does not hear the word “not” - so you are really saying to the subconscious: “*I will eat that chocolate cake.*” Always state things in the positive: “*I eat less and less chocolate cake.*”

Did you know that the 30 minutes before you go to sleep at night are when you are the most suggestible? That is a time to put positive thoughts of change in your subconscious. At the same time, you can also visualize the positive outcome that you want to achieve. Then the subconscious will work on helping you make those changes all night long.

Remember to do this for 21 days in a row for lasting changes. (some-

times it takes longer depending on the issue).

It is also important to understand that the dreams we have after 4:00 a.m. are called our 'venting dreams'. This is the time when the s/c is releasing the old problems.

Some people have disturbing dreams at that time, they wake up thinking. "*Oh no, this bad thing is going to happen!*" NO!!!!!! This is the subconscious trying to get rid of the old habit or problems. Simply say. "*Thank you, please keep moving out of my life!*"

And remember the subconscious mind doesn't like to have a void or vacuum, it will fill it up with things you may not want. So, whatever you are trying to change - think of a positive thing to replace it. Write that down at the same time you write the old problem so that you can quickly fill in the void with a positive.

Did I say this wasn't hard? It isn't if you are diligent and determined to make positive changes in your life.... 21 repetitions will change patterns in the subconscious which is 88% of your mind power!

Have fun and good luck!

Betsie Poinsett is a Certified Hypnotherapist, who graduated in 1988 from The Hypnosis Motivation Institute after completing over 600 hours of clinical residency education and practical experience which was supervised by Physicians, Psychologists, Marriage & Family Therapists and Clinical Hypnotherapists.

Her mission is to unite people of all spiritual viewpoints using earth-based wisdom to experience more peace, harmony and beauty in their life. She has created this sacred space for you to feel safe enough to explore your inner world on a much deeper level. Combining Hypnotherapy, Shamanic Ceremony, Flower Essences, Pendulum & Dowsing Instructions, and Chakra Balancing to create a unique healing modality to assist others.

Dowsing for a Ground Source Heat Pump

By Grahame Gardner

The client wanted a borehole dowsed for a ground source heat pump (GSHP), something that I had not been asked to dowse for before. Yet I was keen to try this in order to expand my dowsing abilities. In discussion with the contractor, I asked what the optimal conditions were that they required for the borehole. I was told that they needed good rock, but also a good supply of water, which would maximise the heat transfer properties.

Not unlike a normal borehole for a water supply, I thought, and that is basically how I approached the dowsing.

I located three water veins at different depths that crossed each other in a triangular formation, about a metre or so across, and staked the centre of that triangle as the drilling point.

Many, many weeks passed until eventually I got a phone call telling me that the drilling rig would be arriving that night, and drilling would commence the next day. Excitedly, I drove the 60 miles to the site the next morning, but no drill rig was to be found – it was still working on a previous job.

This was an important lesson for me – drill rigs are frequently delayed on jobs and rarely turn up on time. The rig eventually arrived two days later, and I returned to the site mid-morning... only to find that drilling had stopped. The good news was that they had found water at the depth I had specified; the bad news was that the drill operator said that the ground

was too fractured and there was too much water for the drill to operate!

His idea of the ideal geology was different from his boss – the drill operator wanted solid rock with only a bit of water around. So, although I had fulfilled the brief that his boss had given, what they had was basically a well, not a suitable heat pump borehole.

Perplexed, I spent some time talking to the operator to determine the best course of action. He wanted to drill near to where the pipes would enter the house, but dowsing suggested that this was not the best place. Eventually, I settled on the dowsing question, “*where is the best possible place to sink a borehole for the GSHP that will maximise the chances of a successful hole?*”

This led me to a spot slightly more to the rear of the house than previously, but not any great increase in distance. Of course, the client by this point was unsure of how best to proceed, eventually asking me what I would do if it was my property. I said that of course I would have to trust my dowsing, and so they decided to drill in my revised spot the next day.

I got a report that evening saying that although they had found water and fractured rock at the same depth as the previous hole, the fracture zone was not as thick as before, and on continuing to drill they had gone through into good rock all the way down to 140m.

The lining and the pipes for the GSHP had gone into the hole without problems (this is often the most troublesome part of the operation), and everything was fine. So, the client was very happy as they now had a GSHP in a good location, and a source of fresh water from the first borehole if they wished to tap that in future. Sadly, I only got paid for one hole, so I now refer to this as my ‘BOGOF’ (Buy One, Get One Free) dowse!

Is Luck only for the Irish?

How you can create luck in your life.

By Trisha Matthies

Reprinted from the Ozark Research Institute newsletter, Spring 2019

March is the month we celebrate Saint Patrick's Day by wearing green, listening to Celtic music and drinking ale. The images of scattered shamrocks also bring to mind the expression, '*the luck of the Irish.*' I grew up hearing this saying. A simple explanation my mother would give when something positive or lucky would bless us. But as an adult, I wondered.... what is LUCK ... and how do you get it?

To some, luck is considered an accident of good fortune, and to others it is destiny or fate. I think luck refers to all '*good things*' that come our way, no matter how small, whether by way of chance or destiny.

These '*good things*' are life's blessings of prosperity such as health, happiness, and yes, even wealth. They can be so subtle that if we are not paying attention, they can pass us by.

Don't wait to win the lottery to consider yourself lucky; otherwise, you may spend most of your life feeling very unlucky.

So is luck only for the Irish or is it for anyone? Well, it depends on whether you believe you are lucky, or unlucky? I feel being prosperous comes from the way we think of life and ourselves. In my Reiki and meditation practice, I work with my clients to help them release negative thought patterns and be open to a new way of thinking ... positively!

What does thinking positively have to do with living prosperously? Good question. To put it simply, thoughts are energy, and energy makes things happen. Therefore, we have the ability to create our own life; lucky or unlucky, happy or unhappy, comfortable or uncomfortable, depending on our thoughts.

For example, I am sure there has been a time in your life that you have felt that a black cloud has been following you around. The more you felt that way, the darker that cloud seemed to become. Many times this '*poor me*' attitude can send more negative energy your way. This is explained by the concept of '*like attracts like.*' Energy seems to be drawn to similar energy.

Sometimes, people just get caught in a negative pattern or downward spiral. When we fall into this type of rut, being positive seems impossible. But that is not true. If you can conjure up a negative thought, then you can conjure up a positive thought! Believe it or not, this new way of thinking may take some practice. Here are some steps to start thinking positively, so you can create luck and prosperity in your life!

1. Being Aware of Your Thoughts.

The first step is to simply take notice of your thoughts. Do you tend to think negatively? Do you criticize yourself about your appearance, finances, or performance? What about the way you speak to others?

Ask a friend or co-worker if you think negatively or positively and brace yourself for the answer. Take notice of your thoughts throughout the day and stop them if you start to sway towards the not so positive.

2. Changing Your Thoughts.

If you are accustomed to thinking one way, change can be challenging. Once you catch yourself with a '*not so happy*' thought in your head, stop it, and change it to a positive thought.

For example, the brakes failed on my friend's car. She was very upset focusing on the unplanned financial expense. She felt she was being followed by that big black cloud.

However, I brought it to her attention that she was actually very lucky that she had opted to drive home on the slower back roads, instead of the fast paced highway.

Realizing she avoided a potential accident, she then changed her thoughts from negative to positive and her outcome from being unlucky to lucky! Remember to look for the little blessings in all of life's lessons, and instead of a black cloud, keep an eye out for a rainbow.

3. Faith in Prosperity and Yourself

Believe that you deserve prosperity and have faith that you can create it. Part of attracting positive energy towards you is believing that you can. Maybe the Irish are lucky merely because they believe they are!

Trisha Matthies is a Reiki Master-Teacher with a holistic healing practice in Norwood, Massachusetts. Her services include Reiki and meditation sessions, as well as a variety of self-exploring classes.

Please visit her website at: www.TheHealingMoon.com

... thoughts are energy,
and energy makes things happen.

Therefore, we have the ability to create our own life;
lucky or unlucky, happy or unhappy, comfortable or uncomfortable,
depending on our thoughts.

- Trisha Matthies

How Lucky We Are!

By Jim Harvey

American Society of Dowsers, Spring 2008

This is an open letter of appreciation from Jim Harvey to Steven Herbert, Secretary of the 'Water for Humanity' Committee, and to past and present committee members, for their time and energy volunteering to provide a conduit for improving water supply conditions in underdeveloped parts of the world.

I just received the winter issue of the American Society of Dowsers Newsletter, and as usual, the first article I read was your Water for Humanity (WFH) Fund News Update.

As a retired Easton (Pennsylvania) water supply worker and AWWA member, my heart goes out to people in under-developed countries who must survive without safe drinking water for their normal, daily requirements.

Since 1991, the Water for Humanity Fund via the American Society of Dowsers, has provided funding for water resources development, purification, protection and conservation worldwide in areas of critical need.

During our many water breaks or water system upgrades, we had to turn residential water systems off for emergency repairs. This in turn would immediately draw the ire of the many families involved. All I would hear was, “*What am I going to do without water? I have kids, they have to use the bathroom, I have to take a shower before I go to work, I have people over for dinner and I need water to cook.*”

Reading your many Water for Humanity News updates referring to the deplorable water supplies in this world made me think, “*Can I do without clean running water for 48 hours?*” (not the lifetime that so many people living in isolated villages must endure.)

I decided to devise a test to see if I could not only live without running water, but reward myself if I could survive.

The 48-hour test requirements are:

1. Before the test, draw 5 gallons of water per person, per day. This will be used for all essential uses: drinking, cooking, bathing, washing clothes, and sanitary facilities.
2. Turn off the running water in your house.
3. Have available the required number of 5 gallon buckets to hold water, for water test. The disinfection of buckets is optional.
4. Five gallons of water is my estimate of the maximum amount of water (35 lbs.) I would be willing to carry on my head from any distant water source to my village. That distance in miles will vary.
5. Check as you may have some nearby source of water, such as a spring or stream, for non-essential water use.
6. Be prepared to haul water from the nearby source to wash the car and water the lawn, trees and garden. These items are considered non-essential, and extra work will be required.
7. One Job-Johnnie, delivered.
8. A \$100 dollar check to use for a nice dinner as a reward for completing the test.
9. Know the location of the main house water valve or switch, to turn off

the water pump.

After turning off the main house water valve, I walked through to verify that the water was really off. It was. I then sat down to reflect on what clean, flowing water supplies meant for me:

- Kitchen sink to wash dishes, and water for cooking.
- Bathroom sink - personal hygiene.
- Washing machine - clean clothes.
- Water heater - hot water.
- Furnace - heat for house.
- Ice machine - ice water and other cold drinks.
- Outside spigot - water for lawn, trees and garden. Water to wash auto and family dog.

Wow! What a list. I had forgotten some of the many uses for water in my house. Without it, I could be living in an isolated village hauling dirty water vessels on my head for miles, with waterborne diseases in all available water sources.

I ran and turned the water supply valve back on before I was even half-way through my own challenge, knowing full well that I would never make it on the allotted quantity of water. **I gave up the test.** But I think how lucky I am! In reality, I have all the necessary water requirements at my fingertips to use any way I want.

Enclosed is my \$100 check to the Water for Humanity Fund because I didn't finish the test. I realize it's not a lot of money, but imagine how those checks will add up as more and more dowers around the world take up this challenge.

To the Water For Humanity Fund: Please put my check to good use.

Some village may need a little help for a new water well. I only wish I could sponsor the entire cost of the new well system. Imagine that. Then I would leave a small but very special imprint on this world after I leave.

Just a further thought about the test.

Make up your own improved version of the test and give it to someone you know. Challenge your friends to give it a try. See how many \$100 checks you may get from them for the ASD Water for Humanity Fund.

This challenge is for all dowsers worldwide who read this. The Challenge may renew our awareness of the need for clean drinking water, and remind us of the unsanitary conditions many of the underprivileged people in this world must endure.

We have good reason to be proud of the many projects our Water For Humanity Fund has underwritten, and the many village wells, pumps and training WFH has provided. Yet we must always remember those important applications we received but had to postpone or deny because our funds were already stretched too thin.

How lucky we are!

Submitted by Jim Harvey, 59151 Overseas Hwy. Lot 20, Marathon, FL 33050, email: riverrat97@juno.com

How far can you carry five gallons of water on your head?

As you read these words, thousands of women are returning to countless villages around the globe with gallons of water in vessels balanced on their heads. Think of them as you take the 48-hour water challenge.

Then contact ASD and ask how you can help our very own Water For Humanity program to extend its mission. (1-802)-684-3417

Noxious Earth Energies Influence on Humans

By Kate Bachler,

Reprinted in part from the American Dowsers Society newsletter, June 1987

The human being is enveloped by a kind of radiant body as a protective sheath. In a healthy human being this protective sheath serves as a defense against harmful influences. It is invisible to the naked eye but can be felt by babies, very young children and sensitives. This radiant body can be punctured and impaired by all kinds of influences. Dowsers who spend too much time with their rods are also at risk.

There are a number of environmental influences which can harm us when we are asleep or working for long periods of time in one place.

Sources of such influences are underground streams, geological faults, cracks and fractures in underground rock and, also, the so-called 'nets' or 'grids', i.e. zones which are spread over the entire globe.

The origin and effect of these grids have yet to be fully explained. In my opinion, the most damaging to human health are underground streams, and the so-called 'Curry Net' which is named after Dr. Manfred Curry who carried out and published the original research.

They are invisible vertical walls of radiation which can be detected in every storey of a building. The radiation walls of the Curry Net run diagonally from NW to SE and from NE to SW. In Central Europe these

walls are approximately 3.5 m apart and, on average, 80 cm wide.

One man had a neutral, i.e. a good bed place and was healthy. His wife was exposed to two kinds of interference, i.e. water and Curry Net. She suffered from cramps, had various illnesses and a great deal of pain, particularly when lying in bed.

Her child was born prematurely at 6 1/2 months and her doctor told me that without his intervention she would have lost her baby, it being nature's way to get rid of all that is diseased. As the cot stood directly above the crossing, the baby cried and screamed, tossed and turned, and had convulsive fits until it was utterly exhausted.

The mother had to comfort the baby up to 20 times a night. So I would beg all of you, whenever you hear of a baby or child crying all night, to tell the parents to move the cot until the baby sleeps soundly. Many a man sleeping above such a crossing is unable to father a child and many a woman remains childless. Many couples only had their wish to have a child fulfilled, after moving their beds to a good place.

Babies and young children escape from radiation whilst asleep. The baby rolls away. The two-year-old rolls right to the edge, pushing hands and feet through the bars. Moving the bed a mere 50 cm away from the wall brought the desired effect: the baby stayed in the middle and slept soundly.

A seven-year-old sleeps rolled up in a ball. It is obvious that such children will not wake up refreshed. The bed should be moved to the place to which the child escapes. A nine year-old in Argentina escapes to his brother's bed, whilst asleep.

Many children escape to their par-

ents' bed, but only when they sleep in a bad place. When their bed is in a good place they sleep soundly all night. I have recorded a few hundred such cases in drawings, proving that we are not dealing with coincidence but with a natural reaction. These are facts, not theories. Scientists need to be humble enough to allow themselves to be guided by these facts.

The sudden death of little Michaela. This child's bed was also on an interference crossing. The death might have been triggered by a strong surge of electric current since the parents' flat was in a power plant. The US scientist Egon Eckert has recorded many cases where surges of current above subway stations have been responsible for cot deaths.

Electric appliances, boilers, TV sets, freezers next to, behind a wall or on the floor below, can also have bad effects. The same goes for fluorescent lights, cassette recorders, radios and radio and battery-operated alarm clocks next to one's bed.

As a baby Veronica kept running a temperature and developing angina, whatever medicine she was given. She had to go back into hospital again and again. Once her bed was moved she recovered in a matter of days. Her doctor confirmed that she is now fit and well.

A young mother felt absolutely exhausted and in despair because of her two naughty boys. She implored God: "*Almighty God, help me, I cannot go on like this. I am at my wits' end!*" and her prayer was answered. Only two days later, by a stroke of good fortune, I was able to find the harmful cause.

At 10 o'clock at night, the boy whose bed was above an interference crossing, would begin to toss and turn, throwing his arms about as if he were demented. This was the time the boiler on the other side of the wall would begin to heat up. After their beds had been moved both boys slept soundly. Their health, as well as their behaviour, improved. The mother wrote: "*We are now a happy family*".

International Dowsing Conference Update

The registration is open at <http://dowsingdownunder.com>. Places are limited so make sure to register early so as not to miss out.

Every month until the conference opens, I will introduce one of the speakers. Today we look at **Ren Ellett**:

A dowser of almost 20 years, and involved with The New Zealand Society of Dowsing & amp Radionics Inc, for about the same time.

“Initially I used my dowsing skills in regards to my work as a farmer, but then I discovered the ‘*Atlantean Power Rod*’. The incredible impact one could have using a ‘*power rod*’ really excited me.”

Ren will be conducting a workshop: **The Atlantean Power Rod**. The purpose of this workshop is to magnify your thought pattern. Ren will share with the attendees the many different ways his ‘*power rods*’ come into action.

From hastening the mending of broken bones; applying fertiliser to the farm; removing negative influences in other people’s lives, be they down the road, or at the other end of the globe, and so much more.

Quotes

The only way to do great work is to love what you do.

~ Steve Jobs

Library News

We have a new DVD in the library, requested by a member. Below is the blurb on the cover.

Crop Circles of the 21st Century

This is an awesome collection of some of the most significant formations to occur this century. The DVD takes you on a remarkable odyssey where you can see the relationships and meanings between the formations over these years.

A combination of wonderful aerial and ground pole video photography makes this an illuminating experience. Crop circles that appear to have related design features and meanings are grouped together.

The music is composed and performed by The Response Collective.

Circles 2010

An in depth survey and exploration of the 2010 SEASON. This DVD brings you revealing aerial photography and intriguing ground pole shots that highlight the details within the formations. You will experience the wonder of the formations as they appeared in the fields of England from May till August. Through his engaging narration STUART DIKE shares his thoughts and views on the 2010 season. An inspiring production.

-Helen

Speaker for September 15th, 2019

Dr Bianca De Reus

- Animal Communication -

Bianca is an inspiring and passionate Soul Being, who loves the connections between animals and people, bringing them together with love, joy, and harmony.

She helps animal lovers to connect deeply with their animal friends, by tuning into animal language through one-to-one and group programs. Bianca is a game changing animal communicator and soul connection

mentor who works outside the norm, and takes people to a higher energy when working with animals.

Bianca is also a warm, engaging, and inspirational speaker, spiritual activist, Master Reiki and Shambala healer.

This has led her to develop spiritual abilities, which empower her to share her wisdom with people around the world.

Speaking topics include:

- Tuning into Animal Language
- Become familiar with your Spirit Abilities and Connections
- Wake your S.E.L.F up and Shine!
- Creating a co-working space at a high vibrational level
- Discover Soul-to-Soul Connection
- Your Pet is your Mirror
