Views expressed in articles are the opinion of the individual writer only, not necessarily the collective view of the Society.

Speaker for July 18th, 2010

Gaynor Foster

The Oneness Blessing

Sydney Oneness Blessing Giver, Gaynor Foster, talks about the Oneness Blessing.

The Oneness Blessing is the phenomenon behind the work of the Oneness University. It is a transfer of energy through touch or by the power of intent that helps to create a growth in consciousness, producing a shift in the perception and experience of life.

The Oneness Blessing is also found to help heal the body and release repetitive emotional patterns, resulting in greater ease and comfort with oneself. In relationships, it enables a greater sensitivity and connectedness with others, freeing us from the limitations of our judgements and conditioning.

When more people enter into a state of Oneness, the potential arises for a flowering of the heart of all humanity, ushering in an age of peace and harmony for the world.

The talk will be followed by a short meditation, and the receiving of a hands-on Oneness Blessing.

From the President

I can see the London skyline across the allotments from the attic study of my friends in Dulwich, the London Eye, Canary Wharf Tower, the Gherkin and new Olympic buildings to the east. St Paul's Cathedral, a great spiritual centre, is now dwarfed by the Towers of Mammon, dedicated to the bottom line.

Quite different from yesterday in Languedoc, looking south to the snow-covered peaks of the Pyrenees and across the valley to Rennes-le-Chateau, famous for buried treasure and a priest who did extensive building using cash from an unknown source. A notice in the church says the treasure is inside us, and who could argue with that?

On Monday we climbed Montsegur, the last Cathar stronghold, a frightening and atmospheric experience. All around is evidence of a brutal suppression of liberty and culture because of politics and religious intolerance. It still goes on and has to change. It will change.

The papers here are full of plans for a new austerity, cutbacks in services, and people are very stressed. Seeing travellers running along station platforms, I can't believe I used to find my Oxford Circus office an exhilarating place to work.

Before long it will be back to sleepy old Bowral, after forays in the British Museum, theatres, a family wedding in Scotland and nostalgic dinners with relatives and old school mates. See you soon.

Best wishes

Noel

Summary of May presentation on Communication

by George Parfoot

It has been said that we humans only use a small part of our brain [6%-10%]. Why were we born to not use 94% of our brain, and like tails, should it not have withered and dropped off long ago? Maybe it will be needed in the future!

This talk was the result of a set of circumstances that recently fell into place. These were concerning the President's address in the May newsletter, the article in that same newsletter about Intention and Attention, and the booked speaker for the society cancelling at short notice, all coming to my notice on the same day!

In the talk, an attempt was made to widen the concept of communication, which most people are aware of but have forgotten, away from mobile phones and text messages, and to discuss how generalised the faculty is, and in some instances life-saving. This comes under the heading of Telepathy which most, if not all have experienced, either as a recipient or transmitter. Animals and birds are also capable of exchanging information both ways. Now let us stretch it a bit further.

Minerals, in the form of rocks, contain information which can be recalled using Psychometry, and quite recently with Dr Masaru Emoto's research, we now find that water is also part of our unseen world. Both rocks and water can receive and give back information.

Plants of course can communicate, but not everyone considers the possibility of having a Findhorn in their own backyard, or being another Dorothy. I wonder why? The book 'The Secret Life of Plants' by Peter Tomkins and Christopher Bird is worth a read. The concept of growing your own fruits and vegetables, and finding that those plants that you have nurtured contain more than is realised, in fact, are many times more

beneficial. Only fresh produce, in-season from the locality in which you live, can supply the nourishment for that individual. After all, you have cared for and watered the plants with love, and the plant responds because you have communicated your intention and attention.

Healing, both hands on, and what is referred to as absent or distance-healing, as shown by many practitioners such as Arigo and Edgar Cayce, all transmit and receive information concerning an imbalance of the body, both physical and mental. Prayer is a good example of focused intent.

Intuition is a gut feeling that comes from within, but what about that information that is specific for an event that is in the future, which, when heeded prevents an accident? This information can be conveyed in various forms. This can be where you miss the bus, the plane, or a voice gives specific directions. Doreen Virtue wrote a whole book on readers' accounts of Archangel Michael preventing accidents.

This brings us to Synchronicity, a term first used by C.G. Jung, published in 1955, which described unrelated events which turn out to have a purpose, which then as the penny begins to drop, implies an intelligence behind the scene, *sotto voce* off-stage.

The audience was invited to read some accounts from previous listeners that illustrated some of these points. It was thus shown that communication can and does take place at many levels to the benefit of the individual, provided an open mind is used, as thinking can be a deterrent. We have assumed that the brain's right and left hemispheres are necessary for a balanced individual. This may not be altogether true because most of the information received, described as revelation, intuition, love at first sight, comes from the heart. You don't think, you feel. That feeling you know to be honest and true, and in time will trust it. Your brain is very manipulative and has a hidden agenda. It feeds on doubt, insecurity, and fear. The heart however, is your higher self, does not manipulate, tell lies, or is on an ego trip. You don't think when you

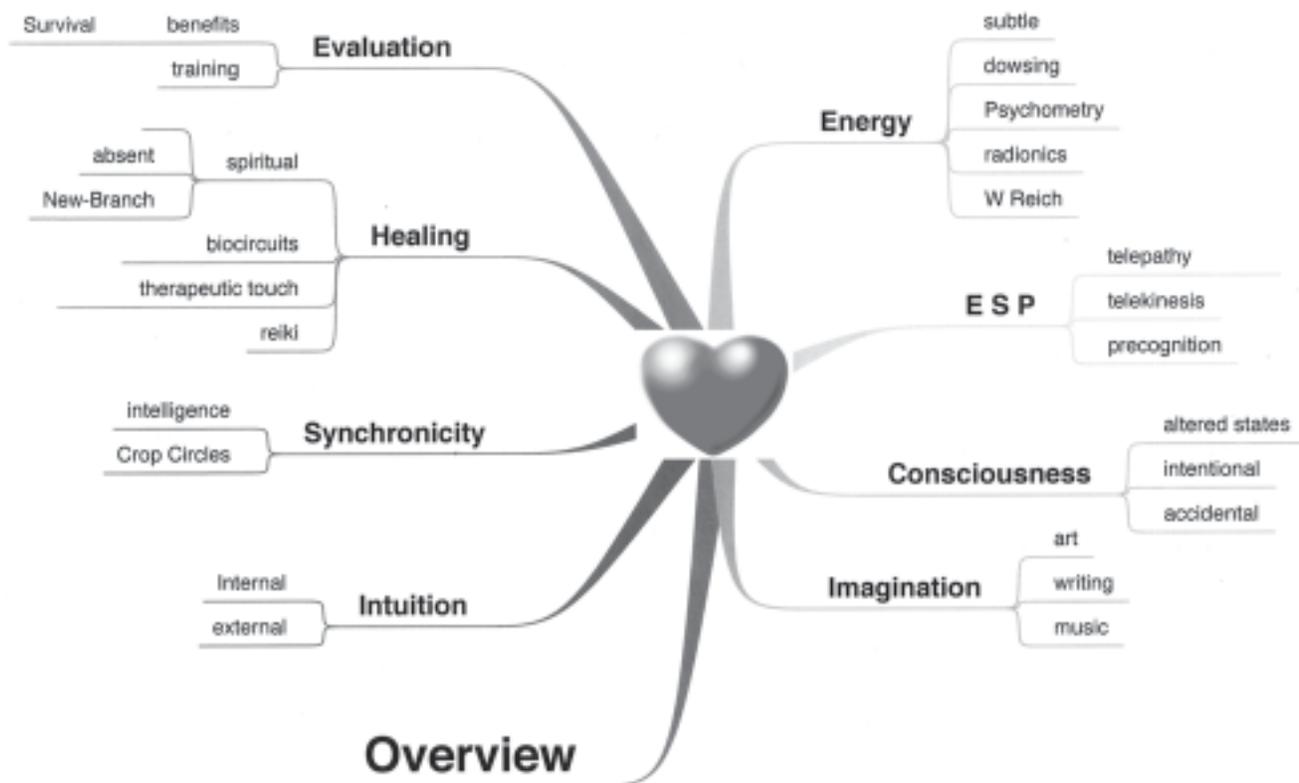

dowse, you translate a feeling.

This talk on communication was the result of a set of circumstances. The advertised speaker could not attend, and I had a conversation with a friend about my visit to the chiropractor, who suggested that I do less labouring and stick to what I know. Driving home the thought occurred to see whether Marie, the speaker coordinator, would be interested in my giving a talk in the future.

On phoning, gasps of surprise, and mutual tingling feelings became evident as Marie was at her wits end, learning, just prior to my call, that the speaker was unable to attend. Could I give a talk this Sunday? It was as though someone was listening to my conversation hours ago!

In a time when some might think that electronic communication is overwhelming us, perhaps it is now time to step back and allow the silent communication, that is always there for us, to be noticed and nurtured.

George Parfoot

Don't We All

I was parked in front of the mall, wiping off my car. I had just come from the car wash and was waiting for my wife to get out of work. Coming my way from across the parking lot, was what society would consider a 'bum'.

From the looks of him, he had no car, no home, no clean clothes, and no money. There are times when you feel generous, but there are other times that you just don't want to be bothered. This was one of those 'don't want to be bothered times.'

"I hope he doesn't ask me for any money," I thought. He didn't. He came and sat on the curb in front of the bus stop, but he didn't look like he could have enough money to even ride the bus. After a few minutes he spoke. *"That's a very pretty car,"* he said.

He was ragged but he had an air of dignity around him. His scraggly blond beard kept more than his face warm. I said, *"thanks,"* and continued wiping off my car.

He sat there quietly as I worked. The expected plea for money never came. As the silence between us widened something inside said, *"ask him if he needs any help."* I was sure that he would say "yes" but I held true to the inner voice.

"Do you need any help?" I asked. He answered in three simple but profound words that I shall never forget. We often look for wisdom in great men and women. We expect it from those of higher learning and accomplishments.

I expected nothing but an outstretched grimy hand. He spoke the three words that shook me. *"Don't we all?"* he said. I was feeling high and mighty, successful and important, above a 'bum' in the street, until those three words hit me like a twelve gauge shotgun.

“*Don't we all?*” I needed help. Maybe not for bus fare or a place to sleep, but I needed help. I reached in my wallet and gave him not only enough for bus fare, but enough to get a warm meal and shelter for the day.

Those three little words still ring true. No matter how much you have, no matter how much you have accomplished, you need help too. No matter how little you have, no matter how loaded you are with problems, even without money or a place to sleep, you can give help.

Even if it's just a compliment, you can give that. You never know when you may see someone that appears to have it all. They are waiting on you to give them what they don't have.

A different perspective on life, a glimpse at something beautiful, a respite from daily chaos, that only you through a torn world can see. Maybe the man was just a homeless stranger

wandering the streets. Maybe he was more than that.

Maybe he was sent by a power that is great and wise, to minister to a soul too comfortable in themselves.

Maybe God looked down, called an Angel, dressed him like a bum, said: “*go, minister to that man cleaning the car, that man needs help.*”

Don't we all?

Author Unknown

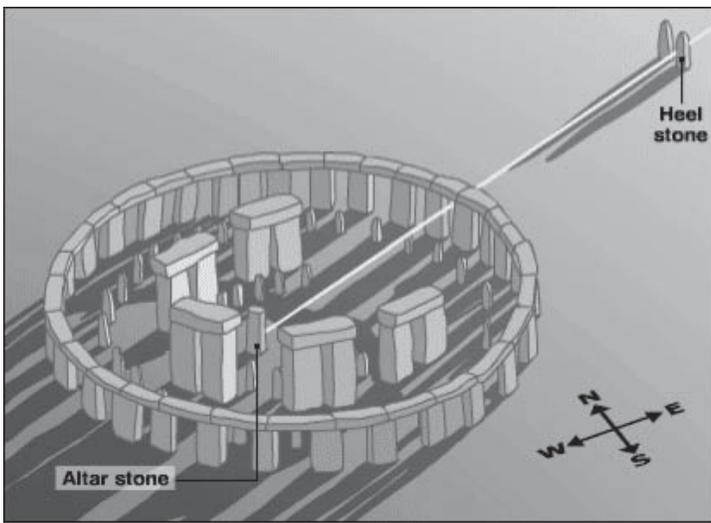

Stonehenge

Stonehenge, located in the English county of Wiltshire, 13 kilometres north of Salisbury, is surely Britain's greatest national icon, symbolizing mystery, power and endurance. Its original purpose is unclear to us, but some have speculated that it was a temple made for the worship of ancient earth deities. It has been called an astronomical observatory for marking significant events on the prehistoric calendar. Others claim that it was a sacred site for the burial of high-ranking citizens from the societies of long ago.

While we can't say with any degree of certainty what it was for, we can say that it wasn't constructed for any casual purpose. Only something very important to the ancients would have been worth the effort and investment that it took to construct Stonehenge.

The stones we see today represent Stonehenge in ruin. Many of the original stones have fallen or been removed by previous generations for home construction or road repair. There has been serious damage to some of the smaller bluestones resulting from close visitor contact, (prohibited since 1978) and the prehistoric carvings on the larger sarsen stones show signs of significant wear.

In its day, the construction of Stonehenge was an impressive engineering feat, requiring commitment, time and vast amounts of manual labor. In its first phase, Stonehenge was a large earthwork, a bank and ditch arrangement called a henge, constructed approximately 5,000 years ago. It is believed that the ditch was dug with tools made from the antlers of red deer and, possibly, wood. The underlying chalk was loosened with picks and shoveled with the shoulderblades of cattle. It was then loaded into baskets and carried away. Modern experiments have shown that these tools were more than equal to the great task of earth digging and moving.

About 2,000 BC, the first stone circle (which is now the inner circle), comprised of small bluestones, was set up, but abandoned before completion. The stones used in that first circle are believed to be from the Prescelly Mountains, located roughly 240 miles away, at the southwestern tip of Wales. The

bluestones weigh up to 4 tons each and about 80 stones were used, in all. Given the distance they had to travel, this presented quite a transportation problem.

The question of who built Stonehenge is largely unanswered, even today. Julius Caesar and other Roman writers told of a Celtic priesthood who flourished around the time of their first conquest (55 BC). By this time, though, the stones had been standing for 2,000 years, and were, perhaps, already in a ruined condition. Besides, the Druids worshipped in forest temples and had no need for stone structures.

The best guess seems to be that the Stonehenge site was begun by the people of the late Neolithic period (around 3000 BC) and carried forward by people from a new economy which was arising at this time. These 'new' people, called Beaker Folk, because of their use of pottery drinking vessels, began to use metal implements and to live in a more communal fashion than their ancestors. Some think that they may have been immigrants from the Continent, but that contention is not supported by archaeological evidence. It is likely that they were indigenous people doing the same old things in new ways.

Some psychics say that Stonehenge itself was originally covered over, possibly with turf, and used as an initiation centre, which, given the earth energies, is not impossible. Archaeologically no evidence for this has been found to date, and it is at variance with ideas that Stonehenge was once an observatory.

Architecturally, the large upright stones of Stonehenge show evidence of entasis, that is, that they have been purposefully made to bulge in the middle so that at distance the stones look straight. Otherwise, owing to an optical illusion, they would look as if they were sagging inwards; which suggests that they were meant to be seen.

Stonehenge Altar Found

London: A missing ancient altar stone from Stonehenge may have been found beside a road. Archaeologist Dennis Price, yesterday said, he was convinced the stone, which was at Stonehenge when it was first studied in the 17th century, was now in two pieces in Berwick St. James, Wiltshire, a couple of kilometres from Stonehenge. Mr. Price believes the stone was taken from the site in the Victorian era.

He said the stone bore an uncanny resemblance to those on a Victorian era woodcut of a Stonehenge stone being cut in two.

We have not heard any more about this. Does anyone know of a dowser picking up the “echo” of this missing stone at Stonehenge ?

WA’s replica Stonehenge

One of Western Australia’s prized beaches will become home to a life-sized replica of Stonehenge under a controversial plan to lure more tourists.

More than 100 stones, some weighing as much as 50 tonnes, will be erected on a hill above Twilight Beach at Esperance, south-east of Perth. It will be the world’s first full-size replica of the 4000-year old English monument. Fundraising is under way to come up with \$1.2 million for the project.

The Sunday Telegraph, April 18, 2010.

(One wonders if the site was dowsed beforehand and the proper alignment for the stones obtained. Esperance is on the south-west coast of Western Australia, and has beautiful beaches of very white sand, which are unfortunately spoiled by a constant cool breeze off the sea. I am sure most of us will be interested to see the monument when finished).

Dowsing Seminar for August 29, 2010

The Society is committed to an educational role in dowsing, so we are announcing our fourth seminar for this year.

This is a follow up to the 'Practical uses of Scientific Dowsing' presentation held in September last year, presented by Francois Capmeil. It will be an intermediate level seminar which will include a review of last year's material.

The Seminar cost is \$120 for members and \$140 for non-members. Non-members will have the opportunity to join the Society on the day at a discounted price. A seminar registration form is available on the next page. If you want to attend, pull the registration form out of the newsletter and mail it, with your cheque or money order, to our Seminar Coordinator, Sally Lamont. Sally's details are on the form on the next page.

When:

The seminar registration will begin at 9:30 am for a 10:00am start, on Sunday August 29th.

Where:

Community Hall, 44 Gladesville Road, Hunters Hill, Sydney, NSW, see back of newsletter for directions.

Who should attend:

Dowsing experience is necessary to obtain maximum benefit from the seminar. This is not a beginner's seminar. It is intended to expand your knowledge and offer practical ways to decode the energies around you in order to correct and balance them.

What to bring:

- Your own pendulum.
- A Virtual Cone pendulum, if you have one
- A picture of someone you care for and a picture of a place you like
- Your lunch. You can also find cafes close by on Gladesville Road.

- Pen and paper

A Virtual Cone pendulum will be provided on loan for the training, if you do not have one. You will also be able to purchase one if you wish.

What you will learn:

Morning session:

The morning session will be focused on understanding the concepts behind Scientific Dowsing. The concepts will be presented clearly, supported by a power point presentation, a lot of examples and ample printed material.

- The 12 energy qualities
- The physics of quality
- The 3 balancing, beneficial energy qualities
- The nature of Energy
- Learn to use the Virtual Cone pendulum
- Learn to calibrate your Virtual Cone pendulum

Afternoon session:

The afternoon session will focus on applying the concepts to practical situations. We will do exercises to learn to balance doors, windows, rooms and technology devices like mobile phones, TV etc. We will also look at a special approach to designing balanced environments.

- Colour balancing technique
- Balancing objects
- Rotation balancing
- Using specific balancing shapes
- Resonance testing, food, vitamins etc
- Polarity testing
- Design principles

The participants will receive a comprehensive seminar manual, a Scientific Dowsing Kit and morning & afternoon tea will be provided.

Cost: \$120 members or \$140 for non members

Please make cheque or Money Order payable to

A Matter of Perspective

It just all depends on how you look at things. This genealogy researcher, called Judy, in this English speaking country (which shall remain nameless), was doing some personal work on her own family tree. She discovered that the great-great uncle of that country's Prime Minister, called Remus, was hanged for horse stealing and train robbery in 1889. Both the researcher and the prime minister share this common ancestor.

The only known photograph of Remus shows him standing on the gallows at the xxxxxx Gaol. On the back of the picture Judy obtained during her research, is this inscription: 'Remus horse thief, sent to the Goal 1885, escaped 1887, robbed the xxxxx train six times. Caught by the xxxxx Police Force, convicted and hanged in 1889.'

So Judy recently e-mailed that country's Prime Minister for information about their common great-great uncle, Remus.

Believe it or not, the prime minister's staff sent back the following biographical sketch for her genealogy research:

'Remus was famous in xxxxxx during the mid to late 1800s. His business empire grew to include acquisition of valuable equestrian assets and intimate dealings with the xxxxx Railroad.

Beginning in 1883, he devoted several years of his life to government service, finally taking leave to resume his dealings with the railroad.

In 1887, he was a key player in a vital investigation run by the xxxxx Police Force. In 1889, Remus passed away during an important civic function held in his honour when the platform upon which he was standing collapsed.'

Now that's how it's done, Folks!

A Voyage of Discovery

The 90's saw the appearance of large increases in electromagnetic radiations (EMF) around us. Mobile phone towers started to flourish everywhere and computer usage became very prevalent. I started to notice the effect on my health, as my heart began to beat irregularly, and I would wake up with anxiety attacks. I decided to get medically tested. At the clinic, they set me up with a small portable electrocardiograph machine, which I had to carry with me through my normal day-to-day life for a few days. On analysis of the daily recordings, my heart was mostly fine during the day, but something was affecting it during the night.

Looking for a possible cause, I realized that the head of my bed was right against the wall supporting a 240volts 3 phase electrical power box. Moving my bed away from that wall readily fixed my heart's problem. This was a tremendous wake-up call.

I joined an internet forum to research the subject. I became very interested, particularly in a solution based on the research of an Austrian scientist named Wilhem Reich. He coined the name Orgone, for a very pervading energy which he discovered (or re-discovered more likely). This energy he found is needed to sustain life. I started to make devices based on a material called Orgonite. This composite material was supposed to generate Orgone, and to clean polluted orgone. Orgonite is a simple mixture of polyester resin, metal shavings and quartz crystals, molded into a shape, usually in a muffin tin.

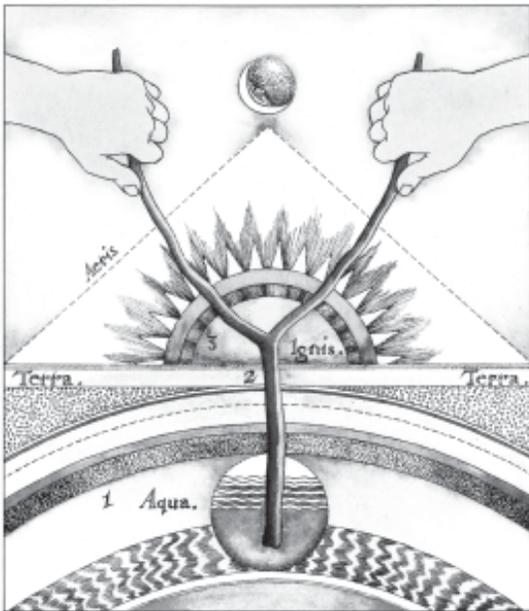

People started to make these devices based on the premise that Orgonite would suck up bad energy, clean it, and put it back out. Orgonite was supposed to be the solution to the strange weather patterns, drought, floods as well as EMF radiation of all kinds.

I made a substantial number of these devices, but I had no means of quantifying their effectiveness. Over time, more and more designs came

out from all over the world, some with outrageous conglomerations of resin, crystals and copper pipes.

THE DIVINING HAND

The 500-Year-Old Mystery of Dowsing by Christopher Bird

One day, as I was visiting a bookshop, I felt a tap on my shoulder. I turned back, and found myself face to face, not with a person but with a book called '*The Divining Hand*' by Christopher Bird. I started to read the book in the bookshop and got totally engrossed in it, until the shop attendant asked me if I was going to buy it or not. I did, took it home, and read it right away from beginning to end. I could not put it down. I was fascinated, astounded. "*How come I had never heard of dowsing?, and there it was, used all over the world*". I could see the possibility that dowsing could be used

to test the effectiveness of my Orgonite designs.

Some time later, I found an advert for a Dowsing seminar in Sydney, conducted by a lady from Brisbane. The course was quite unsettling, we were 'measured' to see if we would be able to dowse or not. When it came to me, the lady shook her head ominously... I rated too low, I did not pass. Needless to say my ego was shattered.

This did not give me a lot of confidence in myself. I felt that perhaps there was no one in Australia who was able to teach me how to dowse, and that I had better teach myself.

Searching the net, I came across Walt Wood's website. He had written a beginners hand book in response to a lady called Robin, and kindly placed this booklet, he called '*A Letter to Robin*', on the web as a free download.

I printed it, and tried to follow the clear and simple instructions. I got totally into it. After several hours of practice, I realized that I could get my

pendulum to respond to my command, without even moving my hand, just using my mind. Within a day or two, I could get the pendulum to do anything I wanted. It was a great feeling, not yet terribly practical, but a step in the right direction never the less.

The next step was to learn to pass the control over to what the book referred to as my '*Dowsing System*', which I equated with my 6th sense. So I devised an exercise to test this. I would take a deck of cards, and dowse the colour of the next card, on a shuffled deck of cards. On my right, I would place the cards I guessed properly, on the left, the other cards. I spent one hour every night playing this game, mostly ending up with roughly 50-50, plus or minus, in each pack. After an hour of high concentration, I would be exhausted.

Slowly, I started to get a few more cards on the right than on the left. One evening, doing the exercise, I had a flash: I knew what the colour of the next card was. I knew that the next card would be red, I just knew it, something in me had the certainty. I slowly turned the card over, and yes, the card was red. That was the proverbial light at the end of the tunnel. All I had to do was to practice, practice, and practice. Some part of me could access the answers. All I had to do was to awaken that possibility in me. Now that I had the confidence based on my experience, no one could tell me that I could not dowse. Boy did I feel good!

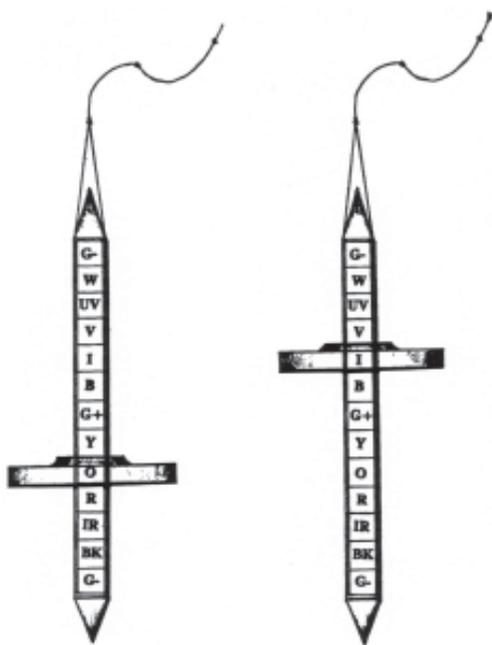

I eventually stumbled upon the Dowzers Society of NSW. The day I attended my first meeting, Peter Ruehmkorff who was the president then, was doing a presentation. I was very impressed with his talk and I joined the Society right away. At that time there was no training seminars held in Sydney, so back to the web again. From the site where I found the 'Letter to Robin', I found that The American Society of Dowzers were holding their yearly convention in Vermont USA, the year was 2003 and right away, I decided to go.

To make the expensive trip, all the way from Sydney to near the Canadian border worthwhile, I registered for one pre and one post convention

workshops. Both proved life changing. The pre-event workshop was with Joey Korn. Joey is a wonderful person and a great presenter, there is no room here to expand on what I learned from him. We have re printed one of his articles in the January newsletter and his website is www.dowers.com. Well worth looking at.

The convention was amazing, I really recommend anyone interested in dowsing to attend at least one of these conventions. The convention went on for 3 days (plus 2 pre and 2 post event days). This convention was held in a boarding high school during the American summer holidays, so we could stay in the empty students bedrooms. Each day was divided into 4

segments. During each segment four talks would be presented. You had to decide which one talk to attend out of the 4 simultaneous ones. Each night a common lecture with the most interesting presenter was held in the large hall.

The post event workshop was on Radiesthesia with Alicja Aratyn. What I learned with Alicja now forms part of the course on Scientific Dowsing I will be presenting later in August. Alicja introduced us to the work of the great French scientific dowers Chaumery and De Bellizal, and some of the tools they designed

back in the 50's. I remember Alicja demonstrating the Universal Pendulum. This special pendulum has 2 dials and emits the energy quality corresponding to the dial settings. Two of the students were quite psychic and they could tell, by the colour of the Alicja's aura, which settings she was dialing. It was quite exciting to get instant verification of this technology. She also introduced the Virtual Cone Pendulum, designed by the same French team. I bought both pendulums. I remember sitting at home, back in Sydney thinking "*What am I going to do with these things?*"

Noel Jordan, our current president, learned of my trip to the convention and asked if I could do a presentation about what I had learned. Having to talk about the subject gave me a very strong incentive to fully delve into the concepts I had brushed on while at the convention.

I started studying the material I had brought back in earnest. I needed to really understand the concepts to use the Virtual Cone Pendulum. The talk went well, but when people asked lots of questions that I could not answer, I realized that I really knew very little about the subject.

At the convention in Vermont, I had attended quite a number of lectures, by Walt Woods, the late Slim Spurling, Doctor Robert Gilbert and others. I brought back with me 12 tape recordings of the best lectures. One evening, I decided to dowse for the presence of Higher Harmonics of Gold (a very beneficial energy quality presented by Alicja) in the voice of the presenters playing on my stereo.

I had checked 11 tapes and had not found any response. The last tape was by Dr Robert Gilbert. When I played the tape the virtual pendulum registered Gold and started to spin immediately. Realising that there was something there, I looked him up on the web and found that he was starting a week long BioGeometry beginner's seminar in Ashville (North Carolina, USA), so I packed my bag and took off for Ashville.

This was the start of a long relationship with BioGeometry®. BioGeometry® is the brain child of Dr Ibrahim Karim, from Egypt. He inherited the work of the French scientific dowsers Chaumery and De Bellizal. The work had stopped after the death of Chaumery from Negative green exposure, as no one was sure how to deal with this powerful energy quality, with intense penetrative power. A situation somewhat similar to Marie Curie with her exposure to radioactive radiations.

An Egyptian dowser and healer called Enel attempted to continue and further the work of the French team. He realized that the Negative green energy quality band contains the spiritual carrier wave. Its ability to penetrate

matter allows it to carry energy, information and consciousness from one location to another. Enel tested the energy around the tombs of the Coptic Christian saints in Egypt and realized that the saints had created great concentration of Negative Green through their spiritual work, some to the extent that their body would not decay after death. Enel found that most ancient religious buildings were designed to cancel the detrimental part of the Negative Green energy quality and enhance the beneficial side, and there lay the secret.

Dr Ibrahim Karim

Dr Karim, an Egyptian architect, unexpectedly stumbled upon this body of work and realized that the answer was very simple. He went on to dramatically further the work under a new name: BioGeometry®. Since then he has developed devices and protocols to balance energy qualities. The danger is in exposure to unbalanced energies. Dr Karim started teaching

this technology and I have attended several of his trainings over the years. His depth of understanding is quite extraordinary.

BioGeometry® is a science that deals with the energy of shape; it uses shapes, colours, motion, orientation and sound to produce a vibrational quality that balances energy fields. BioGeometrical shapes are two or three-dimensional shapes, specially designed to interact with the earth's energy fields to produce balancing effects on multiple levels on biological systems.

Looking at our society from his perspective we see that although we have created marvellous technologies, none of the devices we use are balanced energetically. This furthers the unbalance we experience from modern living in the fast lane. The way we are going, in the future, we will have fantastic technology and poorer and poorer health due to the exposure to the detrimental side of the technology, leading to the eventual collapse of the world we know.

In an experiment, in a small Swiss village called Hemberg, where the arrival of mobile phone antennas in the church steeple, cause splitting headaches to the humans and loss of milk to the cows. Dr Karim showed that simple balancing solutions could remedy the situation at a small cost. The experiment was a success, but the local Telecom could not bring themselves to publically admit that there was a problem in the first place, so the solution could not be recognised broadly. The experiment was reproduced in the village of Hirschberg with the same result.

Coming full circle, dowsing now does allow me to test my designs, some are good, some need alterations. But more than that, it has become a part of my life. I dowse the food I buy, to see if it is in resonance with my body at the time, I dowse how much vitamins and minerals to take. I also use it to energise my food and drink. You can really measure the difference with double blind tests.

I do not dowse for decisions in my life, the natural attunement that dowsing brings, definitely enhances clarity and discrimination. I see dowsing as a tool for understanding. Somewhere inside us is a small voice which speaks the truth, we just need to listen and be quiet enough to hear it. Like the card game, sometimes I get it right, sometimes not, but with practice, it is definitely leaning toward getting it right more often.

Dowsing the Psyche

Judy Shane Ph.D. Excerpt from 'The Quester', December 1999 Issue

The purpose of life is to evolve into a more loving, compassionate and giving human. The pendulum is a useful device which can help us in the task of evolving.

Initially, I used the pendulum in the diagnosis and treatment of patients and had good results. For example, a university student I saw was diligent with his studies until Christmas. Around January he lost his motivation and stopped studying; then his grades fell drastically. He did not know why this happened to him every year.

I ask him to hold out the palm of his left hand and placed my right hand over his. I held the pendulum in my left hand and asked him questions which he did not answer aloud. Since our magnetic fields were connected, his answers came from my pendulum.

I asked if the problem originated in early childhood and I got a "yes." Then I asked if it happened when he was 2 years old. The answer was "no" Was he 3 years old? Again the answer was "no." When I got up to 6 years old I got a "yes." I then asked if something significant happened when he was 6. He said yes, his parents divorced. I asked how he felt when that occurred. He told me his world fell apart, the beauty of life was gone and nothing seemed to matter anymore.

Apparently Christmas unconsciously reminded him of his disbanded family and purposeless existence. Subsequently I asked what treatment modalities I should use and found the techniques the pendulum chose were all effective in curing his lack of motivation.

Not only is the pendulum useful in diagnosing and treating others, it is also one of the most available, objective methods of getting information about ourselves. For example, I have used Gestalt therapy to overcome anger and

forgive some people who have wronged me. Subsequently, I asked my pendulum if I released all my anger. On several occasions, contrary to my belief, I received a “no.” So I did additional therapy on myself. I also asked the pendulum “*am I angry at anyone else*” and was surprised to receive a “yes.” If you don’t know who the person is, have the name spelled out on an alphabet chart.

An accurate personality profile of yourself can be obtained by dowsing traits, and asking if they need to be strengthened. Some traits you could dowse are: kind, generous, flexible, helpful, respectful, thoughtful, polite, friendly, diligent, transparent, moral, perseverant, reliable, natural or genuine, brave, ethical, truthful, accommodating, patient, faithful, spiritual, appreciative, mature, honest, calm, just or fair, humble, etc.

By strengthening these traits in ourselves we will become more evolved both psychologically and spiritually. As Questers and Dowzers we will set a lofty standard for others, so they might follow our example.

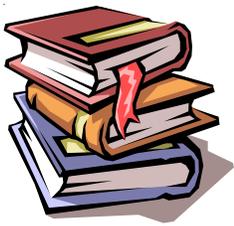

In Loving Memory

Harold McCoy

March 19, 1932 - July 7, 2010

Most of us would remember Harold’s talk to the Society. Harold founded and directed the Ozark Research Institute, Inc. Harold traveled the world teaching and inspiring others to make this world a better place. His wonderful sense of humor will be missed. The blessings he leaves behind are many and he touched many hearts with his love. His teaching and example will be with us. He leave behind a very active Ozark Research Institute, which some of us continue to support.

Marilyn Smith

Speaker for August 15th, 2010

Gordon Willison

Hands on Dowsing

Gordon is a founding member of the Dowsers Society of NSW Inc., and is an Honorary Life Member of the Society. He has been dowsing as a health practitioner for many years and has a wealth of dowsing knowledge.

Gordon will be teaching the audience to use dowsing charts. Some charts will be available but you are welcome to bring your own if you have any. More charts are available on line at this address: <http://pendulumcharts.com/charts.html>.

Gordon has used charts for a long time to determine the condition of patients and in choosing remedies, homeopathic, Bach Flower etc. He is particularly enthusiastic about the benefits of cell salts.

He will be presenting a device of his invention that he uses to broadcast remedies to a patient anywhere in the world. If he has a sample from that person, hair for example, he can diagnose and proceed to send them the remedy.

This should be a very exciting talk.
