Views expressed in articles are the opinion of the individual writer only, not necessarily the collective view of the Society.

Speaker for March 20th, 2011
- Successful Trial in Reversing
Diabetes -
with Guy Kramhoft

Guy Kramhoft has been dowsing health charts for the last twenty years and is constantly researching natural therapies to combat modern illnesses.

His recent day long seminar on '*Pathway to Health*' was a sell-out and was extremely well received. During that day, amongst other things, Guy commented that Diabetes can be treated successfully.

This talk deals with Diabetes, which modern medicine often treats with insulin by injection. However, there is another approach which does not involve drugs. Guy will discuss this new trial therapy in detail, as well as his approach to health.

He will show a DVD, and then follow up with an open discussion of the treatment as shown in the film.

This is a fascinating subject and you will be surprised at this new way of treating the disease.

From the President

Knowing when to hold on and when to let go at a time of great change can be difficult. “In existence there is nobody who is superior and nobody who is inferior. The blade of grass and the great star are absolutely equal...

But man wants to be higher than others, he wants to conquer nature, hence he has to fight continuously. All complexity arises out of this fight. The innocent person is one who has renounced fighting: who is no longer interested in being higher, who is no longer interested in performing, in proving that he is someone special; who has become like a roseflower or like a dewdrop on the lotus leaf; who has become part of this infinity; who has melted, merged and become one with the ocean and is just a wave; who has no idea of the ‘I’. The disappearance of the ‘I’ is innocence.” (The Transcendental Game of Zen, by Osho)

We have to let go for something new and beautiful to happen. Feel the sadness but let go of whatever it is which we have to let go. It could be a job, a relationship or a home we have loved. Something greater is awaiting us all. We are creating a new world, all of us working together, and there are new dimensions to be discovered. We are on the edge of the known and the unknowable. Letting go always represents liberation. But be assured that all will be well. We are so lucky to be alive at this important time. Enjoy your dowsing and I’ll see you soon.

best wishes

Noel

President's Review of 2010

Last year was a year of consolidation. We built on the excellent work of the previous year. There were no huge events like our Silver Jubilee to celebrate and it was mainly a question of following the strategy we developed the year before. Again we have been blessed by an excellent Council who all pulled together and we had some excellent speakers, thanks to Marie, our Speaker Manager, and some superb seminars with tutors like Gisela and Maggie on 'Health and Gardening', Francois on 'Scientific Dowsing' and Guy on 'Pathway to Health'.

As the year went by the number of participants at seminars increased significantly. Whilst having exceptionally low prices we still manage to make a profit thanks to the generosity of our members. Congratulations to you all.

Our web site now managed by Francois, is one we can be proud of and we get an enormous number of visitors accessing it, many thousands each month. It emphasises, with our newsletter, that we are a teaching body and attracts a fair number of new members. We have received many compliments for both of these interfaces with the wider world. But there is nothing like the enthusiasm of our own members for bringing their friends into our very welcoming Society. I confess I'm guilty of that myself.

Attendance at meetings has gone up progressively and we are now having a full house every month. May I remind new members that our well deserved reputation for having the best afternoon tea in Sydney depends on the generosity of our members who bring the delicious food to share. Please remember to share and help us to continue our wonderful tradition. By the way, I like lamington cakes!

Our Library has enjoyed another great year thanks to Marilyn who spends an enormous amount of time researching books, dvds and websites for our benefit. Given our size it must be one of the best libraries of its kind

in the country. It is constantly being updated. As always there are the unsung heroes and heroines without whom we just could not survive, people like Jim who resigned from the Council after many years and Gordon, Erika, Gisela, Tony and Amalia, as well as Lowana, amongst others, who are always there when help is needed and who go about their jobs unobtrusively without any fuss.

This coming year should be excellent because all the people I have asked to serve on the Council, have agreed to do so. Whilst the number of Officers is fixed by our Constitution we can have as many Council members as we like. The beauty of this is that more members can share in the management of our Society, making it more democratic and open to new ideas, and it also gives people experience so that they can serve as officers in the future. This can only strengthen us as a Society and help to guarantee our survival.

Apart from these positive changes, there are minimal disturbances to the Council and the officers are happy to serve for another year, if elected. As for me, I shall also be happy to continue to serve as President, if elected of course, for one last year because the President has to step down after three years and I have already served for 2 years. Thank you for all your support over that time.

There is still much to do. To supplement our seminar program, we must arrange more field trips as this is an ideal way for members to practise out in the field what they learn in seminars. There's nothing like a good field trip for discovering new friends and sharing with beginners the ideas our experienced members have at their fingertips. We must continually strive to improve our skills.

That concludes my report for the year and I shall be grateful if it can be adopted.

best wishes

Noel

Cancer Is Caused By Strong Water Veins

In 1929 Gustav Freiherr von Pohl studied the correlation between geopathic stress and cancer. In 1930, the Berlin Centre for Cancer Research accepted Pohl's findings and published the information in their July journal, positing that earth radiation could be a causative factor in cancer. This article was translated in rough form by Helmut Thiele and I polished the English. I think it is of historical importance and may induce sensitive people with the dowsing capability to repeat Baron Gustav von Pohl's achievement. - Jack Phillips, Saranac Lake, NY.

Medical scientists do not consider the effects of noxious radiations from the earth on human beings to be important, although Gockel noted that radiation comes out of the ground and “*that is surely not without influence on the human body.*” In 1914 Gockel was only concerned with radioactive radiations and not with the even more important negative electric radiation. Only Bach (Bad Ester) was concerned about medical effects.

The present report is the result of thirty years of observations and investigations of the influence of noxious radiations on persons, animals, trees and plants. These radiations are found over all good underground carriers of electricity such as water veins, crystal veins, etc. They flow upward maintaining the same width as the veins with weak side effects.

Physicists and geophysicists have not studied these radiations to any significant extent. Only a few articles have ever been published about them. Professor Blacher (Riga) is of the opinion that they come from the molten core of the earth and are modified by different materials in the earth's crust. Ambronn speaks of currents which flow from the center of

the earth and show up as vertical currents in the atmosphere.

Hess has identified gamma rays of radioactive substances. The existence of such radiation in the atmosphere has been found by Dr. Louis A Bauer, associated with the geomagnetism section of the Carnegie Institute, through their magnetic effects. I have found them to exist 1400 meters above the ground through measurements made in a captive balloon. The effects of these radiations are not attenuated by ice, iron or layers of concrete in contrast to radioactive emanations. Groundwater, brooks and rivers provide no shield against them. Their intensity in the upper floors of tall buildings is the same as on the ground floor and the earth's surface. The boundaries of the radiation are exactly the same on the earth's surface and the top floors of buildings.

Scientists have not explored this kind of negative electric radiation. Nevertheless it is extremely injurious when concentrated by underground carriers of electricity (water veins) and irradiating part of a person's body, whose bed or work space is directly over the source.

Sensitive dowsers know from personal experience that they suffer insomnia if, by chance, they sleep over sources of this radiation while away from home. Extremely sensitive dowsers, which I count myself to be, can actually feel these noxious earth rays if they stand or sit in them for only a few seconds. They feel a kind of electric current going through their bodies and can locate the boundaries of the radiation zones without dowsing tools.

As a result of observations made over a long period of time on the effects of noxious earth radiations on people, including myself, I found that they cause insomnia. Even sensitive persons who were not dowsers were affected. If they slept poorly at home and usually awakened tired and unmotivated but slept well away from home, invariably their beds at home stood over sources of noxious radiation. Conversely if they slept well at home and, occasionally away from home, slept badly, without exception the insomnia was experienced in a bed irradiated with noxious energy.

Other dowsers have made similar observations.

For twenty-five years I have been studying diseases which appeared in people whose beds were over sources of noxious radiation. Without exception in all cases of insomnia, nervousness, neurasthenia, rheumatism, gout, diabetes, kidney disease, gallstones, asthma, heart disease, epilepsy, insanity and cancer, the patient or the deceased slept in a bed over a water vein and/or the radiations connected with them.

Medical doctors with whom I have shared my investigations have always maintained that the connection between underground radiation and disease was coincidental, even though I have found no exceptions. To establish scientific proof that only certain noxious radiations caused illness, it was necessary to conduct a closed investigation of an entire town. Cancer was my first choice, because medical science has not been successful in establishing the cause of the disease, and also because official death certificates would provide reliable information. There was an advantage for me because all the cancer cases I had investigated occurred over very strong radiations. Consequently I could limit my work to determining the location of very strong veins. If cancer deaths in a whole city occurred over strong veins and/or their radiations, this should prove the accuracy of all my individual investigations.

My objective was to identify all the strong underground water veins of a whole city and to mark their location on a map. This would identify houses which were over the veins. Next, this map would be compared with a map showing the houses where cancer deaths had occurred to show whether or not all cancer deaths lay exactly over the veins and/or their radiations. During the test the "death room" had to be examined to determine whether the vein was under the room and also under the concerned bed. To the best of my knowledge there had never been an investigation of the location of the underground water veins of a whole city before this one.

To be scientifically correct I needed official control and a police escort to

permit entering houses and to insure that my work was conducted without questioning the inhabitants. Furthermore it had to be conducted in a city with which I was not familiar.

In December 1928, I approached Burgomeister Brandl of Vilsbiburg in Bavaria, Germany. This city had 3300 inhabitants, 565 houses with about 900 households. For this investigation a small city was especially suitable because the inhabitants make fewer apartment changes than those who live in large cities. Furthermore in small cities the same families own many houses for many generations, which permits study of the hereditary aspects of cancer.

The Burgomeister understood my plan completely and agreed to a police escort and control. He also arranged for the local doctor, Dr. Barnhuber, to produce a list of the cancer death certificates, which I would be able to view only at the end of my investigation. Unfortunately death certificates were only available from 1918, but the officials knew of some earlier cases. There were 54 deaths; 32 males and 22 females. Names, addresses and kinds of cancer were identified. I would like to emphasize that my work would have been impossible without the unbiased and sympathetic kindness of the named gentlemen.

The local general practitioner, Dr. Lifts, was present on my first day as I entered a cancer house I had identified. There were two beds in the bedroom, one of which I had marked as standing in the radiation. The Burgomeister knew that there had been a cancer death in that house. When he questioned the inhabitants he found that the deceased cancer patient had slept in the bed that I had marked.

Dr. Barnhuber, who doubted my theory, proposed that I drive with him to two villages where he knew of cancer deaths. In the first village he, unfortunately, showed me the house where the death had occurred. How-

ever, I was able to indicate from outside, the location of the bedroom and the position of the bed. In the second village, I correctly determined the house with the cancer case at a distance of a hundred meters. I was also able to determine that both the kitchen, and the bedroom above it, were dangerous places as well as the location of the bed in which the cancer patient had slept and subsequently died.

The comparison of my map showing water veins and cancer houses in Vilsbiburg with the local physician's map of houses in which cancer patients had died was conducted by the Burgomeister in the presence of witnesses. The certified record was recorded officially. The decisive paragraph follows:

“It is an amazing fact that all cancer deaths in Vilsbiburg were found to have occurred to people who slept above strong radiations associated with underground streams of water. If Baron von Pohl marked a house as dangerous, he was also able to predict, from outside the house, the room which was dangerous and the situation of the deathbed. In a multilevel house he located dangerous rooms on all floors. Subsequent questioning of the descendents of the deceased by the Burgorneister, the accompanying officer proved that the Baron's predictions were correct without exception! [ed. emphasis] He was even able to predict in which of two beds in a room the deceased had slept, to the amazement of everyone present. His predictions were accurate even in the case of a tower apartment which was twenty-two meters above the ground.”

Conclusion: It is ascertained by this investigation that Baron von Pohl has proved that cancer deaths result, without exception, in houses and/or rooms and/or beds which lie above strong underground watercourses.

Although my investigation was successful, it was criticized by physicians who claimed that there were so many cancer cases in Vilsbiburg, that the test was too easy. Of the 167 offices in Bavaria in the Kolbechen list, Vilsbiburg is the 37th worst place. Consequently I obtained a list of cities with the lowest cancer rates in Bavaria. Grafenau was ninth in the Kolbechen list.

In Grafenau, at the request of the German Central Committee for Cancer Research, Dr. Grave, the local Bezirksarzt, observed my work. There were only seventeen cancer deaths in that city since 1914. All seventeen cases had been sleeping over strong vertical noxious earth radiation. I determined this by locating underground streams associated with this radiation and without any prior knowledge of medical records of cancer deaths.

It should be noted that many individual cases have been investigated by Privy, Bach (Bad Elster), Mrs. Winzer (Dresden). Professor Dr. Wandler (attaining) in Germany and by the Capuchin Father Randoald in Switzerland. They support my conclusions that cancer can only appear through the constant irradiation with noxious rays.

Houses, and the floors of houses, were considered to be factors involved with cancer by Kolb, Pinzing and Werner (Heidelberg). Kolb suggested that it might be profitable to investigate not only the dampness of floors of houses, but also the ground underneath, although he had not considered underground streams specifically. His suggestion, insofar as it includes water running underground, was correct. I have found that groundwater neither radiates nor absorbs noxious energy. But a strong vein of flowing water underneath a deposit of ground water under a house is able to cause cancer.

The intensity of flow of an underground stream is the major factor in determining the dangerousness of the associated noxious radiation. The depth and width of the stream are minor factors. An underground stream flowing under high pressure is always dangerous to people. A broad, leisurely flowing stream is much less harmful.

Reprinted from the American Dowser Quarterly Digest Spring 2005

Agenda for the Annual General Meeting Sunday, 20 March 2011 at 2:00pm

1. Approve the minutes of the last AGM
2. President's Report
3. Secretary's Report
4. Treasurer's Report
5. Librarian's Report
6. Sales Desk Report
7. Appointment of Returning Officer
8. Election of Office Bearers and the Council Members
9. Any other business

Membership Subscription due now

Thank you for being part of the Dowsers Society of NSW Inc. A renewal form will be available at the meetings. They were also placed into the last two editions of the newsletter for those who are unable to attend.

Note: Non-financial members will not receive the newsletter after March, unless they renew.

Election Of Members

14. (a) Nominations of candidates for election as Office Bearers of the Society or as ordinary members of the Council

(i) Shall be made in writing, signed by 2 members of the Society and accompanied by the written consent of the candidate (which may be endorsed on the form of the nomination); and

(ii) Shall be delivered to the Secretary of the Society not less than 7 days before the date fixed for the holding of the Annual General Meeting at which the election is to take place.

(b) If insufficient nominations are received to fill all vacancies on the Council, the candidates nominated shall be deemed to be elected and further nominations received at the Annual General Meeting.

(c) If insufficient further nominations are received, any vacant positions remaining on the Council shall be deemed to be casual vacancies.

(d) If nominations received are equal to the number of vacancies to be filled, the persons nominated shall be deemed to be elected.

(e) If the number of nominations received exceeds the number of vacancies to be filled, a ballot shall be held.

The ballot for the election of Office Bearers and ordinary members of the Council shall be conducted at the Annual General Meeting in such usual and proper manner as the Council may direct.

I _____ of _____
(full name) (address) (postcode)

Also being a Financial Member, for the position of _____

Acceptance Signature of Nominee _____

Notes:

1. As per Rule 13, each council member being proposed must have been **an active member for at least six (6) months prior to their election**. Further the President being proposed shall have served at least one (1) year as a member of council prior to their election. Each member of the council is eligible for re-election. The President is not eligible for re-election as President if they have served three (3) consecutive years in office prior to this election.
2. Members, non-financial at the AGM will not have any voting rights, and after the AGM will not receive further copies of the newsletter.

The Secretary

Francois Capmeil

Dowers Society of NSW Inc

NOTICE OF 2011 ANNUAL GENERAL MEETING

In accordance with Rules 22 & 23 of the Constitution, the Annual General Meeting for the 2011 Financial Year is hereby called to take place before the General Meeting on Sunday 20th March 2011.

NOMINATIONS FOR OFFICE BEARERS FOR 2011

In accordance with Rule 14, nominations of candidates for the election of Office Bearers are hereby called. Nominations shall be of Financial Members and in writing, signed by two Financial Members of the Society, accompanied by the written consent of the candidates (which may be endorsed on the form of the nomination) and shall be delivered to the Secretary of the Society **not less than seven days before the date fixed for the Annual General Meeting** or any adjournment of that meeting.

I _____ of _____
(full name) (address) (postcode)
and

I _____ of _____
(full name) (address) (postcode)

being Financial Members of the Dowers Society of New South Wales Inc hereby nominate

Dowers Society of NSW Inc.

Form of Appointment of Proxy

I, _____ (full name)

of _____ (address)

being a member of the Dowers Society of NSW Inc. hereby appoint

_____ (full name)

of _____ (address)

being a member of that incorporated association, as my proxy to vote for me on my behalf at the general meeting of the Society (Annual General Meeting or Special General Meeting, as the case may be) to be held

on the _____ day of _____
20__

and at any adjournment of that meeting.

*My proxy is authorised to vote in favour of/against (delete as appropriate) the resolution (insert details).

*To be inserted if desired.

Signature of member appointing proxy

Dowsing Seminar for April 2-3rd, 2011 - Dowsing for water at Tabrabucca -

With Trevor Harding

This is a special weekend seminar hosted by Trevor Harding at his farm 'Tabrabucca', in Mudgee (see photos page 20). The farm includes a lodge which Trevor has kindly offered as free accommodation for the duration of the seminar. You can also bring your tent if you wish, or if the lodge is fully booked.

Trevor will provide a friendly, low key, really practical weekend. He will give field experience and guidance on water divining in an atmosphere for integration and bonding.

People can arrive on Friday night, when an evening presentation will feature a DVD and discussion, or on Saturday morning.

Start time on Saturday will be 9:30am with time to find out people's prior knowledge and skills. Late comers will be able to catch up.

There will be L-rods available for everyone, but you can bring your own if you have some. Trevor will demonstrate finding a good quality, permanent underground stream of water. He will show how to find quantity, depth, quality and direction. There are many water veins in Trevor's land, some wells have already been drilled and it is very exciting to confirm his findings.

There will be plenty of time to rest and talk. Last time Trevor ran a weekend like this, people were quite surprised to find water on their own, right after the training. This was for many a very rewarding experience.

Meals:

We will provide bread, butter and cheese to make your own sandwiches, and lovely French salads, with dressing for every meal (Friday evening, Saturday lunch & dinner and Sunday lunch). Bring your own meat, fish or shrimps to throw on the huge barbecue at the back of the lodge. Bring own breakfast food, but milk and juices will be provided. There are plenty of cooking utensils and stoves available in the lodge for everyone to use.

These seminars have a terrific atmosphere, not to be missed. A seminar registration form is available on the next pages. If you want to attend, pull the registration form out of the newsletter and mail it, with your cheque or money order, to our Seminar Coordinator, Noel Jordan.

When:

The Lodge will be open from Friday evening to Sunday after lunch. Seminar Registration will begin at 9:30 am for a 10:00 am start, on Saturday April 2nd.

Where:

See map, Tabrabucca is about 83 km north west of Lithgow. From the City it is about 4 hours drive.

Who should attend:

Everyone is invited. There are twins and double rooms in the Lodge, If we run out of rooms, there is plenty of room for tents too. You can even bring your friends! Some photos from the last seminar at Tabrabucca.

Searching for the water veins with Pauline Roberts

The lodge inside and, out is very comfortable

As You Sow ...

His name was Fleming, and he was a poor Scottish farmer. One day, while trying to eke out a living for his family, he heard a cry for help coming from a nearby bog. He dropped his tools and ran to the bog. There, mired to his waist in black muck, was a terrified boy, screaming and struggling to free himself. Farmer Fleming saved the lad from what could have been a slow and terrifying death.

The next day, a fancy carriage pulled up to the Scotsman's sparse surroundings. An elegantly dressed nobleman stepped out and introduced himself as the father of the boy Farmer Fleming had saved.

"I want to repay you," said the nobleman. *"You saved my son's life."*

"No, I can't accept payment for what I did," the Scottish farmer replied, waving off the offer.

At that moment, the farmer's own son came to the door of the family hovel.

"Is that your son?" the nobleman asked.

"Yes," the farmer replied proudly.

"I'll make you a deal. Let me take him and give him a good education. If the lad is anything like his father, he'll grow to be a man you can be proud of."

And that he did. In time, Farmer Fleming's son graduated from St. Mary's Hospital Medical School in London, and went on to become known throughout the world as the noted Sir Alexander Fleming, the discoverer of Penicillin.

Years afterward, the nobleman's son was stricken with pneumonia.

What saved him? Penicillin. The name of the nobleman? Lord Randolph Churchill. His son's name? Sir Winston Churchill.

New Seminar Addition

We are delighted to announce that Alanna Moore, the international speaker, has accepted our invitation to conduct a one off seminar on Sunday August 28th, titled 'Dowsing for Enhanced Gardening', at the Gladesville Community Centre.

Registration forms for all seminars are available on our website. Hurry, this is a special event, it will fill up very fast. Not to be missed.

In Loving Memory

One of our members, William (Bill) Hinks, passed away on the 3rd of February. He was a very close friend of Erika Schiller. He would come early every month to help setup the hall. A sweet and quiet man, he would always help where he saw a need, and quite often ended up helping at the sales table. We shall miss him.

Quote of the Day

*“An inexhaustible good nature is
one of the most precious gifts of heaven,
spreading itself like oil
over the troubled sea of thought,
and keeping the mind smooth and equable
in the roughest weather.”*

Washington Irving

Marilyn Smith

Speaker for April 17th, 2011

- Gloria Dindima Rogers -

Aboriginal Elder

Auntie Gloria, as she is called out of respect, is a Wiradyuri Community elder who has been endorsed to act and speak on behalf of her Bathurst Community.

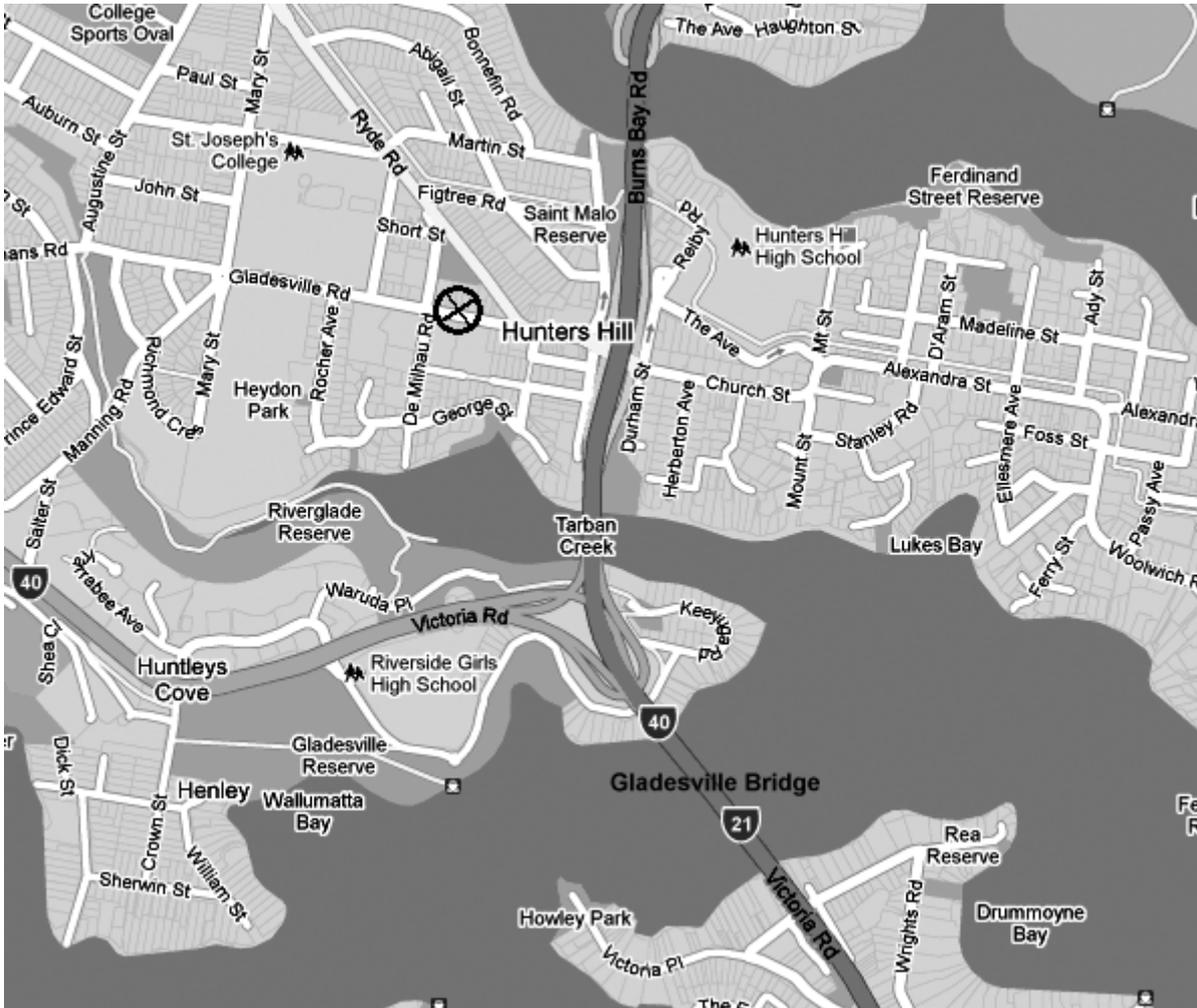

She is a clan elder who has worked extensively within Corrective Services NSW at Bathurst, Kirkconnell and Lithgow gaols. She teaches culture at local schools and does welcomes and warmings at Charles Sturt University Bathurst Campus and within her community.

Auntie Gloria will talk about Wiradyuri culture, beliefs and spirituality.

Our western culture is barely 2000 years old and showing signs that it is not supporting humanity effectively. Aboriginal culture has endured more than 40,000 years.

I find it fascinating that we can get a chance to learn from a culture that has respected, supported and nurtured its people successfully for so long.

Date of Meetings:

Third Sunday of every month, except December (2nd Sunday)

Time: 2:00pm to 5:00 pm

Venue for Meetings:

Community Hall, 44 Gladesville Road, Hunters Hill

Bus Services:

Transport Enquiries: 131 500

*From City, Central : Bus # 501 from Central to Rozelle
then Bus # 506 to Hunters Hill*

From City, Circular Quay : Bus # 506

From Chatswood : Bus # 536

Please arrive at the meeting early so as not to disturb
and be seated by 2:00 pm
