Views expressed in articles are the opinion of the individual writer only, not necessarily the collective view of the Society.

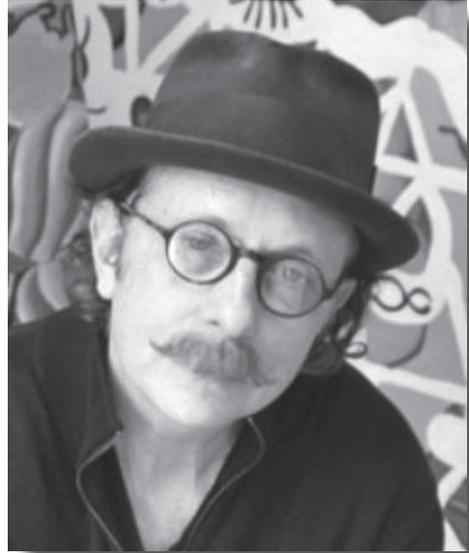

Speaker for November 19th, 2017

Garry Nichols

- Painting & Map Dowsing -

Garry Nichols is a large-scale oil painter, exhibiting in Australia, Japan and the U.S. He has been inspired by the landscape and stone carvings discovered in his youth in Tasmania.

After his move to the U.S., he met the dowser Ted Kaufmann who introduced him to the world of map dowsing in 1985, especially techniques to find missing people and missing objects.

Garry has been a practising dowser since, working with Ted on searches using maps and background information. He has expanded these techniques to include past life and ghost dowsing. In his creative artwork, the winding paths often depicted in his paintings are derived from the movement of the divining pendulum over a topographical map used in his searches.

Garry will share stories, pictures of artwork, sites of inspiration and dowsing experiences. In the act of map dowsing, the dowser transcends the limitations of space. The aim is similar in good art, to transcend all limitations placed beforehand on the artist.

Bring your pendulum or other dowsing implement.

From the Editor

The last few years we have been lucky to have a special overseas guest for our November meeting talk. Last year we had Alanna Moore. This year we continue with special guest Garry Nichols. This promises to be an interesting talk with hands on dowsing. You can see some details on the left page. Not to be missed.

I was stunned yesterday to see all the Christmas decorations going up in the shopping centre, as if time was not running fast enough! So make sure to mark the SECOND Sunday as our December dowsing meeting day. We normally have a talk followed by party time, be sure to bring a plate of food to share.

Our committee is working hard to plan for next year. The only thing I can say at this stage is that there will be some very nice surprises.

This month has been very busy for me with visits to New York, San Francisco and Seattle where I visited the Boeing factory at Everett. An extraordinary site and incredible example of team work.

During the second half of the Second World War, Seattle produced twelve B-17 Super-fortress planes EVERY WEEK, with a staff of 40,000. I was so impressed at first but soon felt the sadness of our human predicament. If we can come together to manage a feat like this against a common enemy, why can't we come together to help each other, eradicate hunger, poverty and sickness which are our real enemies?

Talking about sickness, I was also able to attend the Brooker Colour therapy clinic in Cambridge, New Zealand for a few days. Some of you may remember Allan Brooker who came to give us a talk a few years ago. Allan and his partner Rosanne are still very active and helping people with Colour Therapy treatment. This therapy is effective, painless and free of negative side effects. You can check their website to find more about it. Make sure to watch the video at:

<http://www.colour-therapy.com/>

Until next time

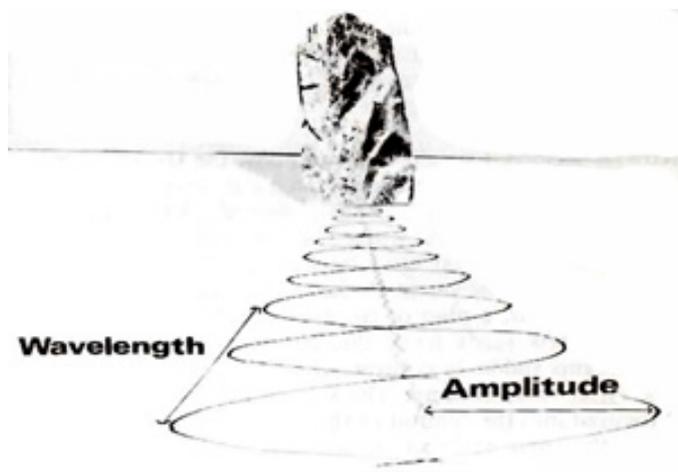

François

Standing Stones and Black Streams

*Excerpts from David R. Cowan
British Society of Dowsers, June 1988*

Since I had first started on this research, I had met no-one who could show me how to pick up the radiation from a standing stone, or anything else for that matter, and so I have probably been working on a slightly different, but parallel, path to most enthusiasts. The energy which I plot from a standing stone is comprised of two sinusoidal waves with a central wave which has a very low wavelength and amplitude, reminiscent of the caduceus, the emblem of the medical profession.

The wavelength, at least in the area of Perthshire, seems to be about 54in., and the amplitude 11 in., although a great deal more work has still to be done in this field.

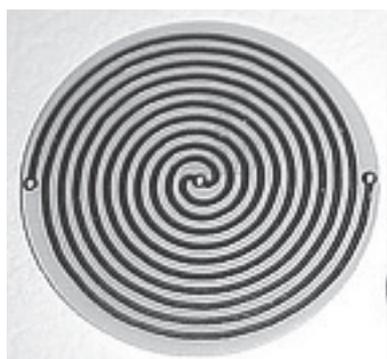

Other researchers, apparently, find an 'earth ray', a straight line of energy across the surface of the ground, with another straight line on each side. The centre line of the earth ray is the same as the centre line of the wave in the above image, the outer lines on either side coinciding with the outer edge of the wave energy. The waves also have height, can penetrate many floors of a building, and can be likened to a corrugated sheet of iron or a magnetic curtain.

The best and most accurate way to measure wave energy, incidentally, is to use one angle rod in your normal hand. This was discovered many years ago on the icy tops of the high hills, where conditions are usually not suitable for glove less fingers.

Since my research into black streams is comparatively recent, I have done

only a little work on the elimination of noxious energy. Obviously the best method is to attack the centre of the spiral itself, which was done by using a form of Lakhovsky coil.

Open circles with opening on opposite sides or two spirals of fence wire are used, one wound clockwise from the outside, positioned on the ground, if possible, under the floor of the house, with an anti-clockwise spiral nailed to the underside of the floor.

Once the spiral has been collapsed in this manner, the over-ground energy flows through the house in normal parallel waves, which are still noxious, and have still to be eliminated, but now the spiral pattern has been changed into ch'i, benevolent energy, now focused into that same spot.

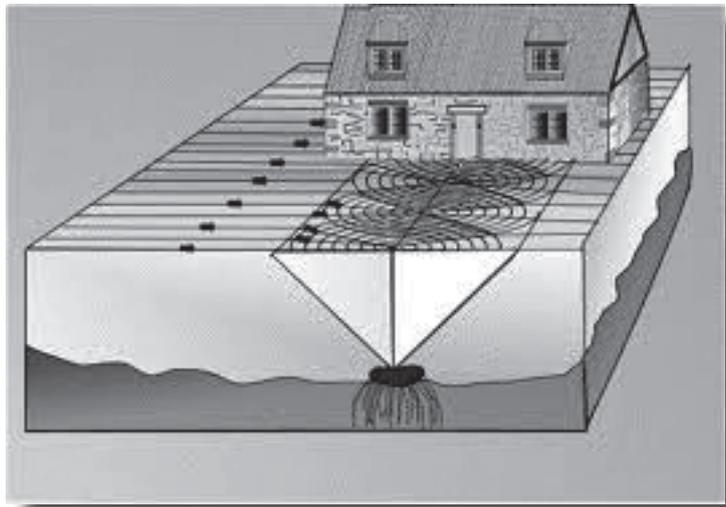

A geiger counter positioned in the centre of one such spiral showed the same readings as the background level, indicating that there were no anomalous radiation levels.

It had been noticed in a mansion fitted with a gymnasium containing a huge wall mirror, that noxious energy crept past either side, with none passing through, despite the fact that the mirror had its back to the incoming energy. Therefore long mirrors top and bottom of a bed are a help in counteracting the baleful energies which are still there, even after the bad spiral of energy has been eliminated. Strangely, the beneficial energy passed through these same mirrors with ease.

It was also noticed that these vertical waves of noxious energy always pre-

ferred a weak point in a house, and could be located at a door, for instance, or a window, always at the edges, where it could most easily pass through.

Amethyst, a well-known healing stone, was placed at the nodal point of a wave, where the outer wave crossed the central one, but found to be successful only in large pieces, the malevolent energy simply warping itself past smaller stones.

Amethyst, a well-known healing stone, was placed at the nodal point of a wave, where the outer wave crossed the central one, but found to be successful only in large pieces, the malevolent energy simply warping itself past smaller stones.

The larger crystals or the cheaper amorphous amethyst had the effect of ‘*cleaning*’ the incoming noxious wave, and altering it to a beneficial, healthy energy. Putting stakes in the ground on the upstream side of each individual beam proved satisfactory for only a short time, the wave eventually changing course.

Others have discovered very similar patterns, both of the energy focusing in to a common point and the more normal individual beam of energy entering a house from different directions, causing illness where they happen to cross, especially under a bed, for instance. This has given rise to the term ‘*cancer verticals*’, localised areas of ionised air which can be found at the same spot on every floor of multi-storied buildings, capable of causing illness to the occupants if they spend much time on that spot, especially when sleeping.

There have been many lessons learned on this painful and tiring quest. If the purpose of this earth ray system is ever to be discovered, it will be by individuals willing to follow the ley streams, to plot them out and obstinately trace them to their source.

David R. Cowan

The Use of Jewel Power

By Heather Willings

British Society of Dowsers, December 1987

One of the pieces of advice given to beginner dowsers by their elders is always to heed the promptings of their intuition. So when mine started saying, “Take off your ring”, when I was going to dowse, I decided the matter deserved investigation. The road has turned out to be a long one, and I am still travelling.

I have half a dozen rings, none of great value, except to me. I took them all out and measured my energy level with and without each one. Five caused a rise in energy, one caused a drop. The joker was a cream-coloured agate.

I read up everything I possessed on precious stones in general and agates in particular. It appeared that the subject could be approached from several different angles.

“Leading Western practitioner, the British healer Edmund Harold, believes the secret (of crystal therapy) lies in the concentrated electromagnetic energy ‘trapped’ in certain gemstones. (...) This energy (...) is released when applied in the right way to a condition to which it is ‘programmed’ to respond. (...) Garnet is good for the blood, agate soothes and turquoise is said to have an all-over balancing effect.”[1]

“Because of the different forces, i.e. vibratory forces, jewels have in their make-up, they can and do affect man when he wears them - sometimes for good and very often not good. (...) All mineral elements do not agree with everyone, and there has to be a selective choice.”[2]

“Precious stones are usually composed of more than one substance and their allocation to given cosmic powers then depends on the particular substance and vibration that are most prominent. (...) On recognizing a common vi-

bration in a plant, a person and a precious stone, one knows which particular stone that person should use (...) the horoscope will serve as a useful control here. (...) We may conclude that agate strengthens the power of the sun in its wearer, improving his ego and his self-esteem.”[3]

So far, so puzzling. Could agate soothe a dowser to the point at which his dowsing faculty started breaking down? Or did it boost his ego too high for him to maintain the attitude of mind of a humble (and grateful) receiver of information? In fact, the two concepts are not incompatible: what is more soothing than a high opinion of oneself?

It seemed possible that the energy level approach would throw more light on the problem. So I brought out every piece of jewellery I possessed and sat down with pen, paper and pendulum.

Some clarification may be in order here. I have been checking people's general energy levels over the past few years, grading them from 1 to 8 in order to be able to double-check results against the notes of the Tonic Sol-fa scale.[4] It became evident that 1/8 to 8/8 represented the different variations in healthy subjects, lower than 1 signified illness, either present or impending, and higher than 8 indicated 'overloading', with consequent strain on the system. A low energy level means a reduced dowsing potential, with a risk of reversed polarity.

Is this 'energy' the life force? All that I can say with certainty is that it is closely connected with the morale. The two rise and fall in tandem. One can get up in the morning with a level of 2/8, feeling the whole of life is pointless. Then the post brings good news and there is a jump to 8/8. But a rise in energy does not necessarily bring an increase in physical strength. When it does, it seems likely that the original weakness had a psychosomatic cause.

I set to work then to check the effects of different minerals on a person's energy level. The first fact to emerge was that the strength of the pendulum's swing (in neutral) indicated immediately whether the substance

held in the hand was an energy booster or a drainer. This is a useful time-saver, as it tells one whether to check upwards along the scale or downwards.

Most of the results were consistent over several days, both in daylight and darkness. There were a few marked variations, highly random in character. Eventually the penny dropped: this was the effect of remanence. I added a damp towel to my equipment, for rubbing the hand on between testings, and started again from scratch.

Various female friends co-operated with enthusiasm. The table gives the results for three subjects tested in the same room on the same afternoon. Admittedly this is a small sample, but most of the general findings have been borne out by tests on other subjects. So it seems reasonable to attribute certain minerals to four provisional categories:

The strengtheners (which raise everyone's energy level): gold* and moss agate*. (Coral and garnet were thought to act in this way, but had to be discounted when one subject was drained by them.) Further tests suggest that malachite is also in this category.

The weakeners (which lower everyone's energy level): jet*, pearl* and topaz*.

The correctors (which boost a low energy level and reduce a too high one): amethyst (unsurprisingly), which has so far given everyone the ideal level of 8*; also aquamarine, alexandrite, copper*, sapphire and rock crystal*. (Tiger's eye was believed to be a corrector, but drained another subject.)

The aggravators (which further raise a too high level and send a low one lower): silver*.

**Finding confirmed by tests on five other subjects.*

	Micheline	Dominique	Erica
	Energy: 10	Energy: 4	Energy: 5

AGATE	-4 (=6)	+4 (=8)	-4 (=1)
ALEXANDRITE	-5 (=5)	+4 (=8)	+3 (=8)
AMBER	-3 (=7)	-5 (= -1)	+5 (=10)
AMETHYST	-2 (=8)	+4 (=8)	+3 (=8)
AQUAMARINE	-3 (=7)	+6 (=10)	+4 (=9)
CITRINE	-5 (=5)	-4 (=0)	+4 (=9)
COPPER	-4 (=6)	+4 (=8)	+2 (=7)
CORAL	+4 (=14)	+5 (=9)	+4 (=9)
CORUNDUM	+5 (=15)	-4 (=0)	-7 (= -2)
DIAMOND	+4 (=14)	-5 (= -1)	-5 (=0)
GARNET	+4 (=14)	+4 (=8)	+3 (=8)
GOLD	+3 (=13)	+4 (=8)	+4 (=9)
IVORY	+4 (=14)	-3 (=1)	+4 (=9)
JET	-4 (=6)	-6 (= -2)	-4 (=1)
MARCASITE	+3 (=13)	+3 (=7)	-5 (=0)
MOSS AGATE	+4 (=14)	+3 (=7)	+3 (=8)
PEARL	-4 (=6)	-4 (=0)	-3 (=2)
ROCK CRYSTAL	-4 (=6)	+5 (=9)	+4 (=9)
SAPPHIRE	-4 (=6)	+4 (=8)	+4 (=9)
SILVER	+3 (=13)	-4 (=0)	-3 (=2)
TIGER'S EYE -	4 (=6)	+4 (=8)	+3 (=8)
TOPAZ	-4 (=6)	-4 (=0)	-3 (=2)
TURQUOISE	-4 (=6)	+4 (=8)	-3 (=2)

Diamond seems to be in a class of its own. At first sight it looked like an aggravator, but when tested against the two gentlemen who had been surveying the proceedings from a distance, it gave their medium-low levels a boost. So perhaps a subject's sex is also relevant, at least in this one case. Diamond corresponds to the male principle, answering to Lethbridge's rate of 24 inches.[5] Micheline is governed by two masculine astrological signs (sun sign and ascendant); diamond affected her posi-

tively, as it did another female friend also governed by two masculine signs. Dominique and Erica have feminine sun signs and ascendants; diamond affected them negatively. The diamond was then tested against two neutered tomcats and the pendulum swung into neutral.

However, for this line of thinking to be valid, it would seem necessary for gold, corresponding to the female principle, to produce a negative reaction when tested against a male subject. But to date it has proved positive for everybody. (The cats produced another neutral reaction.)

With amethyst, a strange phenomenon occurred. One piece of amethyst had a beneficial effect, two pieces were harmful, three were disastrous. If two pieces of amethyst were worn on the same level (i.e. earrings), the effect was still beneficial, but if a ring was added there was draining. This was also seen when the levels involved were hands/feet or head/feet. Copper behaved in the same way. The phenomenon did not occur with garnet, coral, gold or silver.

When I tested myself, the results were as follows:

	Amethyst	Copper
1 level	+3	+2
2 levels	-3	-2
3 levels	-6	-4

(with reversed polarity)

It seems significant that these two substances are the ones most often recommended for neutralizing negative radiation. Dowsers with a scientific background will probably know what principle is involved here.

So, to the crux of the matter: what are the practical applications of these findings?

When it comes to choosing a precious stone or metal to wear on a long-term basis, the energy level method is obviously not entirely reliable.

Other considerations have to be borne in mind, such as the mineral's colour and chemical composition, the subject's personality, state of health and zodiacal influences, as well as the planetary forces governing both mineral and subject. Those who wish to venture further into this complex field will find clear and detailed explanations in Mellie Uyldert's book, '*The Magic of Precious Stones*'.

A more general dowsing exercise will weed out the minerals which, while acting curatively on the energy level, are unsuitable for other reasons.

As an example, Dominique and Erica, who both tire easily, ought theoretically to benefit from wearing red, energizing, blood-enriching stones such as garnet and coral, whereas Micheline, who is over-energized with a tendency to high blood pressure, would surely do well to avoid them.

In Micheline's case this was correct, as the final dowsing exercise showed her wisest choices to be aquamarine, amethyst and sapphire (all in cooling, calming colours) and black-listed coral and garnet. But no red stone was recommended for Dominique and only coral for Erica.

It so happens that the two last-named are both governed by the signs of Cancer and Capricorn, the sun sign of the one being the ascendant of the other. However, Dominique is a 'lunar' personality, and Erica a 'solar' one. The final dowsing exercise pointed to copper, marcasite and turquoise as Dominique's strongest allies, but advised amber, citrine, rock crystal and tiger's eye for Erica.

Significantly, the 'most recommended' minerals were always those most liked by the subject, and the ones advised against were usually disliked.

Where the energy level method is of interest is in the selection of dowsing aids. We all know the bugbear of reversed polarity; if by wearing an energy-giving mineral we can keep it at bay for the time needed to finish the job in hand, that seems like a large return for a small outlay of effort. In fact the appropriate mineral could be pressed into service to help with

any activity. When I sit down to write now I put on a certain necklace, and find that I can concentrate for longer periods. Perhaps red stones, linked with Mars, would be of help when it comes to digging the garden.

It is important, of course, to wear the chosen stone at the correct angle, i.e. with the north pole nearest to one's head. The energy rise may be as much as doubled by careful orientation.

It will be seen from the table that none of the substances tested left a subject as it found her. This is understandable: unless two forces are equal there will always be some kind of reaction. Which prompts one to wonder whether a human being can be harmful to a mineral. Mellie Uyldert writes that anaemic people drain coral of its colour.

At least some metal alloys are devoid of force. I have two necklaces of unknown composition which have no effect on my energy level. Enamel also seems to be neutral. Some varieties of wood are energy-givers, others are drainers. Glass is slightly positive, plastic strongly negative (beware of plastic belts as well).

Energy level testing reveals interesting facts about engraved jewellery. I recently acquired a hand-crafted brass ring with a Carolingian motif. This design is said to have figured on the shields of Charlemagne's soldiers. What it did for them is unrecorded, what it does for me is to raise my energy level by three points (whereas a small brass ashtray has no effect on it).

A friend of mine keeps permanently on her finger a silver ring copied from one found in Tutankhamen's tomb.

This gives me an energy rise of five points, in spite of the fact that silver, for me, is a drainer, which seems

to confirm that the power of symbol, which is spirit, is stronger than the power of matter.

Oddly, when the brass ring is worn upside down (i.e. swiveled round to the palm), it brings about a corresponding drop in energy. This phenomenon has been observed in every subject so far tested. (It has not yet been possible to test the silver ring in this way, as its owner spends most of the year in Amsterdam.) As no one would want to wear a ring in such a position, this does not constitute a problem. But some principle seems to be involved which it might be interesting to investigate.

A number of questions spring to mind on the subject of mixed jewellery. Is the beneficial effect of a strengthener stone diminished by a weakener setting? Is the harmful effect of a weakener stone reduced by a strengthener setting? Or if both stone and setting are strengtheners or weakeners, is there an accumulative effect? A further test session revealed the following:

	Fingertip on stone	Fingertip on metal	Piece worn normally
Diamond in gold	-4	+3	-3
Moss agate in silver	+4	-4	+3
Garnet in gold	+4	+3	+4
Topaz in silver	-4	-4	-4
Amethyst in silver	+2	+2	+2

Accumulation, then, does not occur. And while metals have a small moderating effect on stones, the power of the latter is obviously greater. Incidentally, the relative volume does not seem to be significant: the diamond involved was a microscopic specimen set in a gold locket. The effect of the amethyst needs no comment.

A final point: if the piece of jewellery which complements one's current best dress to perfection turns out to be an energy drainer, is the only solu-

tion to give it away? Obviously not, if it can be cured. There seems to be two possibilities: either to neutralize the weakener with a chip of amethyst or to counterbalance it by wearing a strengthener at the same time. Is either of these methods superior to the other?

Here are the results of some more tests:

Jet alone	-5
Jet + gold	-3
Jet + amethyst:	
North pole of antidote towards head	+5
North pole of antidote towards feet	-2
North pole of antidote towards centre of body	-2
North pole of antidote towards outside of body	-3
Jet + moss agate:	
North pole of antidote towards head	-3
North pole of antidote towards feet	-5
North pole of antidote towards centre of body	-5
North pole of antidote towards outside of body	-5

The results were the same whether the antidote was worn on the same or the opposite side of the body, on the same level or a different one. And in this context the amethyst phenomenon did not occur: when accompanying a weakener, amethysts can be worn on more than one level with no difference in effect.

It will rightly be objected that none of the foregoing proves anything, that dowsing must be corroborated with physical evidence. For a time I was at a loss to know where to find it, then I decided to try the muscle test.

For those who have not attended Jack Temple's courses or had Touch for Health training, certain muscles are related to a specific organ system, and a weakness in the system will show up in the muscle if this is positioned so as to isolate it from the others with which it works, and then has pressure applied to it.[6]

Jack Temple has taken this principle a step further by linking a muscle (often the anterior deltoid) to a meridian point by touching the point with one finger and working the muscle with the opposite hand.

Alternatively, the tester can touch the area immediately above the organ, gland or other part being investigated. And when the subject holds a food or remedy its potential effect can be judged from the muscle's reaction.

So for my needs, which part of the body was the one to test? As energy was involved, the solar plexus seemed a hopeful possibility. I called on my nearest subject and we worked on each other: tester's finger on subject's solar plexus, subject's strongest arm stretched straight forward with thumb downwards, two fingers of tester's other hand on subject's wrist, applying a gentle downward pressure.

We were immediately rewarded. When the mineral held by the subject was a strengthener, the arm stayed effortlessly level; when it was a weakener the arm could be easily pushed downwards.

Monitoring Ley Energy

By David Tilt

British Society of Dowsers, June 1988

The basic diode circuit shown below is the modern version of a Crystal Set. Although I have experimented by using other value RF Chokes, the 2.5 mH choke used in this circuit has proved to be the most effective for monitoring the energy at megalithic sites when used in conjunction with a recording device (a mobile phone will do). The diode receiver is connected to the microphone socket of the recorder, and the receiver is also earthed by using a lead and a metal rod in the ground wherever the recording is being made. If used indoors, for instance at a haunted site, a suitable earth should be located - perhaps a water pipe.

- Part list: H1 2.5 mH, RF choke
D1: 1N34A Germanium Diode
R1: 100K 1/4 watt Resistor

- Veroboard: 63mm x 25mm
Earth wire and crocodile clip.
Small telescopic aerial.
Hook-up wire. Rubber grommets.
Aluminium box with lid 3 x 2 x 1 in.
2 PC board stands 10 mm
Shielded cable with plug to fit recorder.
2 solder tags - small, nut, bolt, washer.

Construction

Drill two holes in opposite corners of Veroboard to accept PC board standoffs. Fit choke, diode, and resistor to PC board. Drill two holes in box lid to accept standoffs, and a further hole to accept telescopic aerial mounted in rubber grommet so that it is insulated from the box.

The box needs to be earthed so drill a small hole in one end of the box to accept small bolt with washer and nut on the inside. Connect earth wire from PC board at this position along with external earth wire. A further two holes need to be drilled - one each end of the box, to accept screened cable to recorder and external earth wire to which crocodile clip is attached.

NOTE:- in using it is not necessary to fully extend aerial.

When using the diode receiver outdoors, I usually position it on the ground with the earth rod fixed alongside.

Indoors at an energy charged location e.g. a haunted room, I have had some interesting results by at first placing the receiver on a table at the centre of the type A energy pattern - this pattern can be located by dowsing.

I have then taken recordings with the receiver at varying distances between the ceiling and the floor, and with the aerial either partially or fully extended.

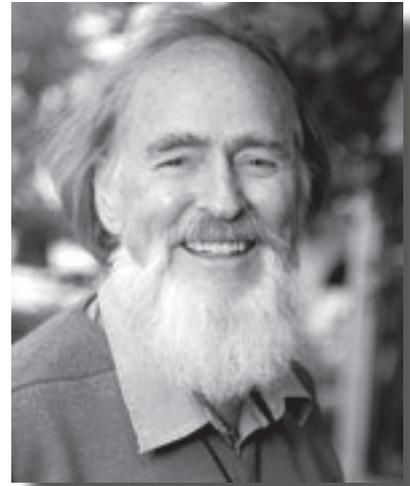

This resulted in the discovery of what appears to be a '*hot spot*' - a point midway between the ceiling and floor where the signals or pulses detected are particularly strong. This suggests the possibility that a haunted room may contain energy lines on more than one plane. In other words, the energy lines within such a room may conform to the axes or lines of symmetry of the crystal that is the source of the energy.

A Memorable Convention

by Stanley Bartlett

American Society of Dowsers, Summer 2010

The following story occurred at the ASD 1995 Convention. I was on the stage with my friend Clif Sanderson at Lyndonville State College for Clif's keynote presentation to the convention that year.

The late Clif Sanderson

Clif was taking written questions from the audience after I sorted through them for him. As I read out one of the questions, "*What can we do as a group to bring about universal harmony?*" I became aware of some commotion off to the right where all eyes had turned towards a person who had collapsed onto the floor.

Not sure at first what had happened, Clif walked over and placed his hand on the man's chest to find no obvious pulse. There was a murmur from the audience as he returned to the stage and explained. He talked about the connection between another question – "*How can we help?*" – and the situation at hand.

He invited all of us to quietly wish this person a good journey. Into that special silence came an extraordinary experience as the people in the packed auditorium focused on thoughts of this man. It was clear to all of us that at some level we were all receiving healing and alignment. From this unity came a true understanding of Clif's message: that is, simply, the importance of allowing an appropriate outcome to arise without imposing conditions distorted by our intellect.

Within moments, the EMTs arrived and put the patient onto the stretcher, expecting to go straight to the hospital.

The big surprise for all of us at the convention came the next morning. Father Kelly, a Catholic priest - the 'dead' man - appeared for breakfast! He was not only happy and full of life, but he told everyone, with some relish, that he had come to the convention hoping to find someone who could help his rapidly failing eyesight, and he now had 20/20 vision! His healing was complete.

He told us that during the ambulance ride, he had 'come to'. "I am fine" he exclaimed to the EMTs. "*Take me back to the college!*" He explained that when he was in the tunnel/worm hole, the Light became strong. He felt all the love coming from everyone at the convention and decided that it was not time to die and so he came back.

I know many people remember this convention because there were also shamans from South America present who had come to the States to bring the foretold integration of the Condor (South -spiritual) with the Eagle (North -technology) symbolism. And no one could forget that the day before Clif's keynote speech, the energies got so strong that there was a most unexpected rain that flooded the local town in about thirty minutes' time and then left a cleansed and beautiful purity to follow.

For several years afterward, Father Kelly regularly wrote to Clif from Florida, always grateful for the help and the experience the people at that ASD convention had shared with him.

At the time of the convention, Clif had been using the phrase '*intentional healing*' in his work, but now he prefers the much more subtle term '*deep field relaxation*'. Since that time, many people all over the world have learned this approach which nicely encourages the blending of science with active spirituality. Indeed, in comprehensive research, Harvard University's Herbert Benson has recently declared that deep relaxation could be "*a phenomenon that could be just as powerful as any medical drug but without the side-effects*" (Anastasia Stephens, The Independent, UK).

Clif had previously spent time in Belarus and the Russian Federation following the Chernobyl nuclear explosion that caused millions of people to be exposed to dramatic life and health changes. He spent many years there assisting people by using his gifts of healing and Feng Shui. He worked in hospitals and, under his guidance, many doctors and even nuclear physicists learned how to use intention and relaxation to reduce the effects of radiation.

Later, this highly successful work was scientifically documented and published, and Clif received the Albert Schweitzer Award for Humanitarian Service to Medicine.

For more information see: <http://deepfieldrelaxation.com/>

Deep Field Relaxation

Deep Field Relaxation (DFR) was created by Clif and Galina Sanderson. Clif was the founding president of the Dowzers Society of NSW, Australia, which he started with a few friends in 1984.

Born in New Zealand (Aotearoa), Clif Sanderson (1939-2013) became known internationally as a creative thinker, mystic and inspirational teacher. He made his first attempt to merge science, mysticism and spirituality while researching and directing the documentary '*God Doesn't Play Dice*' in 1986 for Australian Television. His curiosity and passion turned him into a non-stop traveller, explorer and student of different healing traditions around the world.

The effectiveness of his ground breaking approach – Deep Field Relaxation™ – has been thoroughly researched by German and Russian scientists.

Long before quantum physics theory became commonly known, he started applying consciousness and intention for purposes of healing and transformation. Whenever others tell of the impossible, Clif has invariably broken through that belief with innovative, original and inspirational tools. He tested his own beliefs in the 'real field' by accepting an invitation to work with the victims of the Chernobyl disaster in Belarus and Russia in 1990.

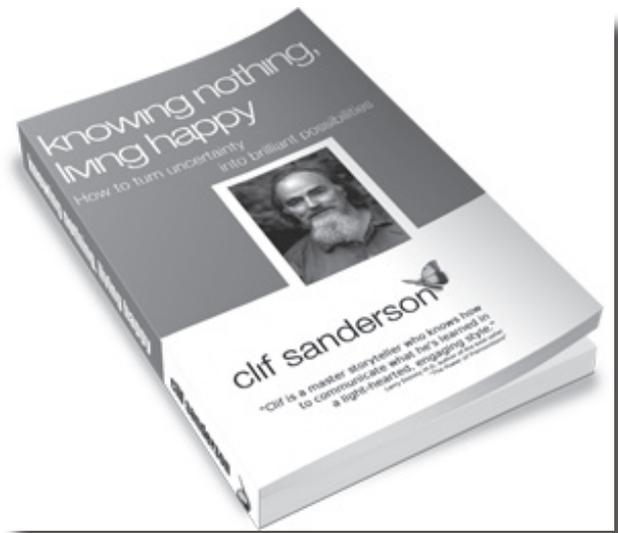

Sanderson participated in numerous medical research projects into the effects of energy medicine and intention in treating radiation related illnesses. The Russian Ministry of Health acknowledged Clif's contribution with the special 'Award for Humanitarian Service to Medical Science'.

Clif's latest completed research with Tumourbiology Institute of Freiburg University (Germany) showed, that DFR brings improvement to the quality of life of terminally ill cancer patients. Professor Harald Walach, director of the Institute of Transcultural Health Sciences at the European University Viadrina (Germany), comments on Clif's work:

"This new and appealing method is a specifically interesting form of non-local healing as it does not involve any form of belief on the part of the patient, and is not about any potential influence that may give cause for concern."

Books: 'Knowing Nothing, Living Happy', 'Making Outrageous Claims', 'Earth Bound'.

Articles : 'Chernobyl, Out of the Darkness' and 'Chernobyl a Message for the Physical World'.

Under the Influence

Reprinted from the Pharmaceutical Journal, 1987

Dowsing is fast becoming a reputable pursuit. A correspondent who is doing some research into the way of life of miners in the Tamar Valley, (UK) has remarked that a fork cut from the hazel was extensively used in finding metallic lodes, and that the use of the twig was demonstrated recently to royal visitors to Cornwall. In the '*Lancet*' for September 19, Dr. N. B. Eastwood describes some experiments he performed on dowsing and its relation to the human magnetic sense.

He confirmed that he could discover the track of a Roman road beneath a modern one. He found that a pendulum suspended between finger and thumb rotated one way over the north pole of a magnet, and the other way over the south pole. He applied his findings with twigs, rods and pendulums to parts of the human body, on the assumption that the body contains small magnetic particles in certain organs.

Aluminium foil laid over part of a detectable Roman road ditch suppressed the dowsing reaction, and it was used to mask various parts of the body in an attempt to localise the sensors. The divergence of rods of metal or wood, and the directional rotation of a pendulum, differed when aluminium screening was employed. The author found that an auditory signal of frequency 108-144 per minute enabled him to detect the earth's magnetic poles.

What is particularly interesting is that the pendulum reaction and auditory signal were suppressed in the locality of television screens and radioactive sources, in the absence of competing dowsing stimuli. If the human body is as sensitive to imponderable external influences as it would appear, and its electromagnetic receptors are preferentially distributed in certain organs and tissues, we ought to pay considerably more attention to the possible health effects of the electrical and magnetic fields which most civilised people have to endure in a technological age.

Library News

We have two new books in the library:

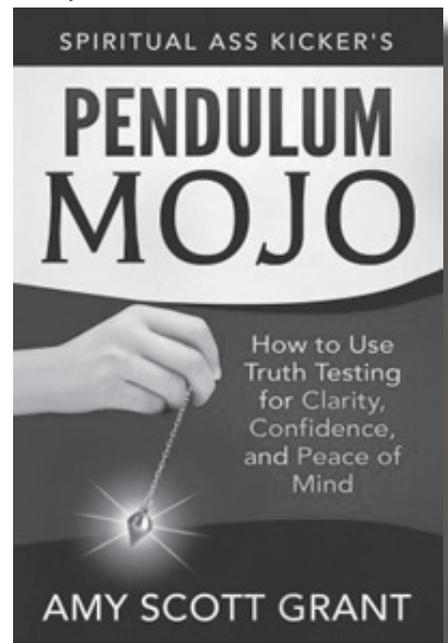

Pendulum Mojo

How to Use Truth Testing for Clarity, Confidence, and Peace of Mind,
by Amy Scott Grant

Discover the power of '*Truth Testing*' and learn how you can use a pendulum to make the best possible decision in any given moment.

Be certain whether someone is telling you the truth. Learn to trust and rely on inner guidance for support. Find out what is good (and not so good) for your body. Learn how to be wise and responsible with your money.

Enjoy peace of mind knowing you're doing the right thing at the right time, every time.

101 Amazing Things You Can Do With Dowsing

By Maggie & Nigel Percy

Put dowsing to work in your life right now in 101 useful ways.

Dowsing is a natural intuitive ability all humans have, but as with any skill, it takes practice to become good at it. A great way to master dowsing is by using it.

This book will give you meaningful, interesting ways to apply dowsing to get answers to questions you need, answers your brain cannot give you.

This book contains not only suggested questions with exact wording, but

offers interpretations of answers and points out pitfalls to avoid. More than just a list of useful applications, this volume takes you by the hand and helps you to become a better dowser, showing you how useful it can be in your everyday life.

Don't put your pendulum on a shelf or give up dowsing for lack of things to use it for. There are questions that pop up every day, big and small, that dowsing can answer. By using dowsing in a meaningful way you will more easily learn to master it and reap its many benefits.

Great Quotes

I've learned that people will forget what you said,
people will forget what you did,
but people will never forget how you made them feel.
-Maya Angelou

If you look at what you have in life,
you'll always have more.
If you look at what you don't have in life,
you'll never have enough.
- Oprah Winfrey

I can't change the direction of the wind,
but I can adjust my sails to always reach my destination.
-Jimmy Dean

Speaker for December 10th, 2017

Anthony Ashworth

-The Extraordinary Temple of Madurai -

Anthony Ashworth is a professional Feng Shui man, Shaman, Dowser, Vastu Consultant and teacher, he helps people get the very best out of life by having their home support them.

He travels like a questing Indiana Jones, but his gold is exploring and trying to comprehend the sacred vibration, resonance and deep symbolism of sacred temples.

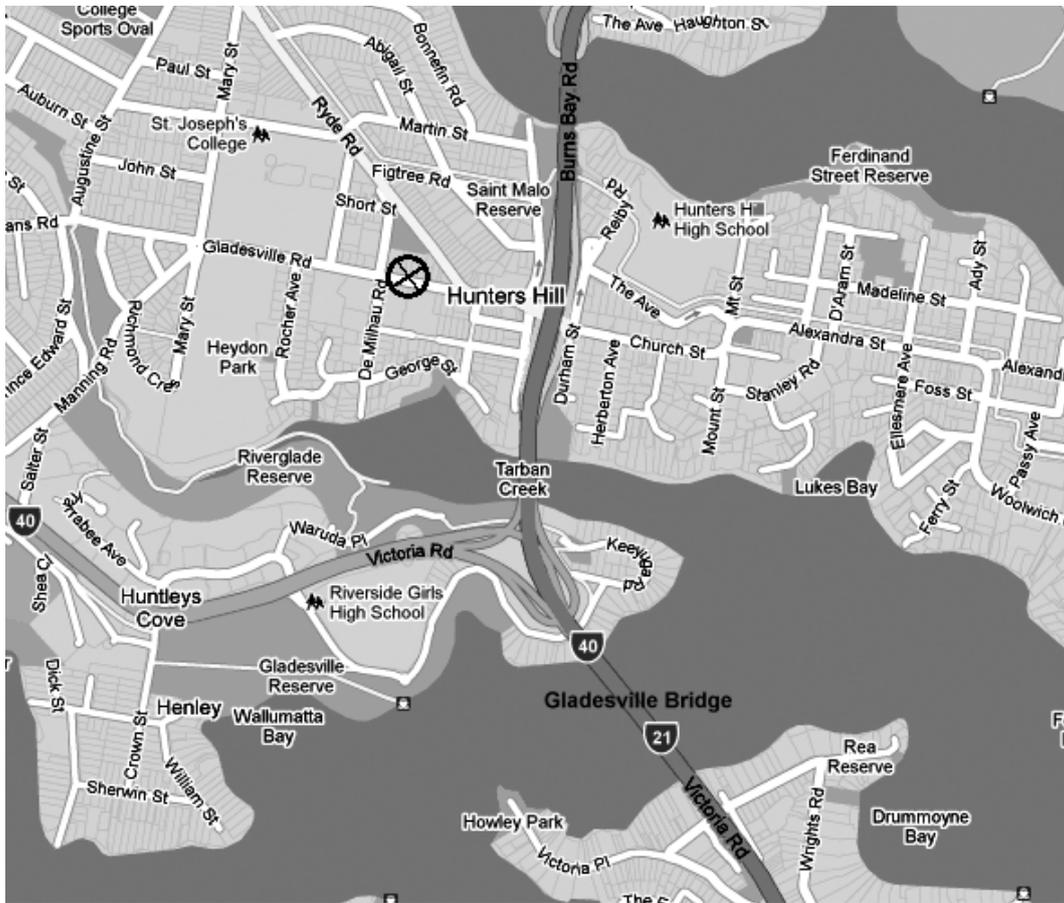

He has travelled to many parts of the world on a quest to explore sacred temples. It is his personal quest to understand the core, archetypal needs of humanity around space and place.

He can personally attest to the incredible and palpable power, peace and extraordinary frequencies that emanate from many sacred buildings and profound natural landscapes. Of all places the Madurai Temple still leaves its sacred mark on him.

In this presentation, Anthony will share his story of Madurai, what he felt and saw in some of the rich archetypal symbolism of the Architecture and Vastu design.

In this virtual visit, he will show and share in the energies and symbolism of the very creation of the earth and the universe itself.

Date of Meetings

Third Sunday of every month, except December (2nd Sunday)
Time: 2:00pm to 5:00 pm

Venue for Meetings

Community Hall, 44 Gladesville Road, Hunters Hill

Bus Services:

Transport Enquiries: 131 500

*From City, Central : Bus # 501 from Central to Rozelle
then Bus # 506 to Hunters Hill*

*From City, 506 bus goes from Town Hall House, Druitt St, Stand L, to
Gladesville Rd, cnr of Pitt St, Hunters Hill*

From Chatswood : Bus # 536

Please arrive at the meeting early so as not to disturb
and be seated by 2:00 pm
