Speakers for September 18th, 2011

- Christine Morgan & David Thompson -

Mediumship

David is one of the world's foremost Physical (materialization) Mediums. He is one of very few who publicly demonstrate this rare ability.

His gifts also include mental mediumship (clairvoyance), deep trance, and psychic surgery.

David has touched every walk of life, young and old, the famous, and royalty, giving proof of the continuity of life after physical death. His work has taken him to the UK, USA, Australia, New Zealand, Germany and Denmark.

www.silvercordcircle.com

Christine is one of Australia's foremost Spiritual Mediums and teachers of the Spiritual Arts, based in Sydney. Her natural mediumistic ability stems from a long line of natural intuitives and heritage of mediumship which has been honed through classical training.

Christine also holds a diploma in parapsychology to compliment her mediumistic abilities.

From the Secretary

Someone famous wrote “*The only thing that is constant is change*”.

We see change all around us, in our own body, the society around us, our planet and even our solar system, all do change... And so does your Dowsers Society.

Our President Noel Jordan has offered his resignation from the position of President, (which he held for the last three years,) and the position of Seminar Coordinator. The Council accepted his resignation and Noel presented his farewell address at the August meeting.

We will remember Noel for his achievements, as we saw the Society flourish under his guidance. He invited many people to help, and his vision lives on in our newsletter, website and seminars. Our website is viewed by thousands of people worldwide at www.dowsingaustralia.com.

Thanks Noel for your efforts, we wish you well in your new endeavours.

Gordon Marshall volunteered to fill in the role of the Society's President until the next AGM in March, when a new council and office bearers will be elected.

Gordon has been accepted by the committee as our new President. We welcome him warmly, and look forward to a great future.

We need to fill the seminar coordinator role, and to move forward keeping the society dynamic and interesting. I will welcome expressions of interest for this role (see page 24).

Changes

Coming back to the subject of change, I remember the words of an Indian poet of the 14th century, Saint Kabir. He lived at a time of total turmoil,

the Moguls had just invaded India and were killing all the Brahmin priests. Kabir wrote a poem about the grinding stones. They are used to grind wheat into flour. They have a vertical pivot pin, held by a fixed stone below, and another stone on top with a hole where the wheat is poured in. A wooden handle is used to rotate the top stone.

I will paraphrase what Kabir wrote in his poem.

“The grains of wheat are poured into the grinding stone, they fall between the stones and get ground into flour in the crevices. I too am fearing grinding due to the earthly life and its constant troubles, turmoils and changes. But he who holds on to the centre pin and does not get into the crevices, will be safe and need not fear grinding”

In the midst all the changes happening around us, and around many people in this world, let's be reminded that staying centred and focused is an essential component of survival. As dowsers, we must focus and still our minds to dowse successfully.

The coming end of our age is perhaps but a change of consciousness. A change we must negotiate if we are to survive. We must learn to work together, not against each other, to work for the benefit of the whole, not the benefit of some and the detriment of others. Imagine if we worked together; the cost of one air force bomber would be enough to provide good clean water for the entire population of the world. According to UNESCO, 2.4 billion people on this planet do not have access to this basic necessity. As dowsers, we know that it is possible to find water for all, if only we pulled together. So I leave you with this thought.... until next time.

Best wishes

François

Garden Maintenance and Dowsing

By Fiona Hopes

Reprinted from the Journal of the Canadian Society of Dowzers Spring 2011

The garden, any garden, whether the Garden of Eden or a tiny window box in a city dank with air and light pollution, every garden of any sort is an ecosystem. In other words, everything is alive, and connected to everything else, including being connected to you. Everything you do, everything you don't do, every thought you think~ all have a resultant effect in the garden that can be most surprising at times. What you do in your garden has a much greater importance than is immediately obvious.

So where does dowsing fit into this larger picture? Well, dowsing is the tool that keeps you on track, helping you to make decisions that are for the highest good, not just for your plot of land or container. Dowsing is the tool that can help you to make those small day-to-day decisions that help life to flow easily, that help your garden and its ecosystem to thrive, and help to maintain the dynamic balance of the space.

Dynamic balance should be your aim in the garden. Dynamic balance occurs when the ever-changing living-ness of everything in the garden is in balance, a balance that is not static and fixed, but is continually changing.

Everything in the garden needs to be in dynamic balance to get the best out of it, and all parts of the garden are inextricably linked. A simple example is finding blackfly on your runner beans. Ants farm blackfly for the honeydew that they produce, like we farm cows for milk. To control the blackfly, you need to look for the ants. Ants need sugary foods, and can be controlled by providing them with what they need. Their climbing activities can be stopped with bands of cotton wool, with non-setting glues or petroleum jelly placed around the stems of the plants, to men-

tion but a few remedies. The nest building and tunnelling activities of ants can be controlled with a thick layer of organic mulch, kept suitably moist. The mulch will encourage the worms, which will aerate the soil, and improve the level of microbial activity, which will in turn encourage healthier plants that are more resistant to the depredations of the aphids.

Everything in the garden is of value and is part of the garden ecosystem, even though you may not be aware of its relevance in the dynamics of the garden community. This gives us a responsibility not to kill indiscriminately, but only to deal with things that are genuine problems rather than matters of taste and preference, and to approach them in the gentlest and least intrusive and disruptive way possible.

It helps to observe the relevance of our 'problems' in the garden, and see them in a proper context. For instance, slugs and snails can do an immense amount of damage in the garden, due to their predilection for fresh tender new growth. But to put them in a true context, slugs and snails are immensely useful in this world, as they clean up all sorts of decaying matter, and if it wasn't for the slugs, we would be wading daily through heaps of rotting plant material and dog s**t. They are an essential part of the garden ecosystem, particularly when you consider that they are a food source for hedgehogs. When the ecosystem is out of balance, such as when we disturb the local energy fields with planting new plants with steel tools, then we encourage an excess of slugs and snails to redress the balance.

If we are to get the best from our gardens, we must work in partnership with nature, rather than trying to control nature, for after all, we are part of nature and the natural world, however much we choose to deny or ignore it. With the current thinking on climate change, loss of biodiver-

sity and cultural diversity, it is evident that the thinking that disconnects us from the land has landed us in serious trouble. We are all part of the same ecosystem.

To maintain dynamic balance, we need to look to nature to know what to do when, and how, so that we are mimicking nature as much as possible.

Timing

Nature works in cycles, in circular time, and as human beings, we tend to think and work in linear time, creating another disconnection from the land. In nature, there is always next year; as humans, we focus on this year alone, and often, just on 'now'.

Nature's cycles are very clear, and with a little thought, it is easy to see how our gardening tasks fit the cycles. For instance, seed planting is most appropriate in late winter and spring, copying the action of the seeds that fell from the plants the previous season that then germinate the following year. Cutting down last year's growth is best done in the spring, copying the action of the March gales blowing away the debris of the previous year's growth after the weakening action of rain, snow and frost on the stems. The dowsing questions to ask before doing anything would be "*do I actually need to do this?*" and "*do I need to do this now?*" remembering to state quite clearly what you are planning to do.

Tools

The whole garden should be maintained with the minimum of effort for maximum effect, just as in nature, and that means using the most appropriate and efficient tools, looking after them well, and using them in the right way. Although I do not advocate regular digging of the soil (it disturbs the dynamic balance of the soil organisms, and there is no-one out in nature who regularly digs the soil, the worms do it for you), there are times when it may be necessary to wield a spade or fork. Removing the occasional tough, deep-rooted weed, or making a hole to plant something, needs the use of the right tool.

Again, the dowsing questions could be “*do I actually need to do this?*” and “*is this the right way to do it?*” making sure that you are clear as to the task you are about to do, and how you plan to do it. Often, your body will give you the dowsing answer, making sure that the task is very hard work for a ‘No’, (it shouldn’t be hard work), that it takes a long time (it shouldn’t take a long time) or that it costs a lot of money.

Time, effort and money are interchangeable forms of energy, and nature never wastes anything, especially not energy. So always check the energy flows within your body and out of your pocket to ascertain whether you should be doing a task in a particular way, or whether you should be doing it at all.

Attitude

Gardens, plants, soils, tasks, everything in the garden responds to thought. A task started with a song in the heart is a task already half finished. Working a garden with love, care and attention yields amazing results.

Never be afraid to talk to your plants, to praise them for their efforts, and appreciate all that they have to give.

Plants are sentient beings, and appreciate the acknowledgement. Always ask your plants for permission before doing anything to them, and thank them for what they do, whether it is to flower, to produce food, or just to fulfil some other man-made desire.

Before moving a plant, always tell it what you are doing, and why, as well as digging the right size hole, and removing the plant with as large a root ball as possible. The plant will generally cooperate if approached in this gentle way, and will release its hold on the soil in preparation to a quick reestablishment in its new location.

Tasks undertaken with resentment, done aggressively, with the wrong tools, at the wrong time, bode only for disaster. The work is done badly and in poor heart, and always creates further work to rectify that which was done with bad spirit.

The dowsing questions are, yet again, “*do I need to do this?*” “*do I need to do this now?*” and “*will my actions benefit the plant? benefit my garden? benefit me?*” Maybe you could add “*is there a better way to do this?*”

I started with the intention to write this article about how you can use dowsing to help you look after your garden. Dowsing is an inner knowing, often demonstrated with the use of tools like dowsing rods, pendulums and the like. This article, like the others before it, has become one on inner knowing, on observation of nature, using your mind to think and understand what you see, and how to take this knowledge into your heart and your inner knowing to work in harmony with the natural world to create your own Garden of Eden.

All life happens through a state of dynamic balance, constantly growing and changing. We are also constantly growing and changing, too, and need to see the outer world of nature as a reflection of our own inner world. When we manipulate and abuse our outer world, we are manipulating and abusing ourselves.

When we work and live in harmony with the outer world, we are living with respect and love for ourselves. There is no difference between ‘out there’ and ‘in here’. One way to learn to love ourselves, to grow and develop in understanding and peace, is to garden in harmony with nature, working with nature’s own patterns and rhythms.

*“I am part of all I see
All I see is part of me
And where I am, is where I be”*

Dowsing with a Bobber

*By Diane Marcotte, Reprinted from the Journal
of the Canadian Society of Dowsers, Spring 2011*

A bobber can be any flexible wire with a handle at one end. Usually the tip end is weighted with a small wooden bead. To increase the “bounce” of the bobber, the wire may be coiled into a spring an inch or so from the end inserted in the handle.

The bobber can be used for:

- obtaining strict YES/NO/MAYBE responses (although a pendulum is less cumbersome to use for this purpose)
- working with energy (clearing pollution, increasing someone's or something's life force, healing)
- searching outdoors for water veins or energy lines (gives advance warning as one nears the feature)

Specific Responses

Hold the bobber away from you at a comfortable distance with your arm slightly bent. The first step is to determine your responses. You may want to ask for a bobbing up and down motion for YES, a sideways motion for NO, and a swing off at a 45 degree angle for MAYBE/READY. Swinging in a clockwise or counter-clockwise circle can represent others responses ... you are the programmer!

Working with Energy

Mentally state your intent, e.g., to raise the energy in a body of water, a town, a room, etc. At times, the bobber may seem to be actually drawing odd symbols in the air and then suddenly change to a circular motion. Just let it do its thing! When the bobber stops moving, you have accomplished what needs to be done for the moment.

Be sure to check to see if the procedure needs to be repeated at another

time. You may find that two or more repeats are necessary. It all depends on the size and scope of your project.

In addition to raising energy, the bobber can be used to remove non-beneficial energy from a specific location or individual. Then beneficial or loving energy can be introduced to replace the outgoing, unwanted one.

It is not advisable to just disperse the unwanted energy into the ‘universe’. Instead, ask that it be transmuted into a beneficial or healing energy. Use a positive term that reflects your belief system.

Searching for Water Veins and Energy Lines

The bobber is a great tool to employ when working outdoors. As you walk over the area being searched, the tip of the bobber will begin to move as you approach the feature. This gives you advanced warning so you can slow your pace.

You can also use the bobber to determine the depth of a water vein. For example, start by making the bobber bob up & down. Begin counting down in feet, with your intent being that the bobber will stop bobbing and move to a left/right horizontal swing once you call off the correct depth.

Diane Marcotte is a long-serving member of the Canadian Society of Dowsers.

A range of bobbers are available during our monthly meetings for you to try. Ask Ron Yabsley at the sales table to show you.

Dowsing the Health Effects of Modern Technology

by Kerry Louise Gillett

*Reprinted from The American Society of (Dowsers
Volume 51, Issue No. 2-3 Spring/Summer 2011*

On three occasions in the first half of 2010, a Northern California dowsing group called Dowsers Doing Good Deeds (DDGD) got together to use dowsing to find out how modern technology is affecting our health and wellbeing.

One of the topics DDGD researched was digital signals, which these days is the dominant signal used to distribute electronic information, such as through the Worldwide Web, television cable systems, and cell phones. We also explored the health effects of microwave ovens, cell phone towers, cell phones, and WiFi, where electromagnetic radiations are taken to a new level as human beings concentrate the power, modify the frequencies, and alter the wave forms of electrical currents.

This article shares with you the findings of DDGD gained through group dowsing. For those of you who would like the short version, here is a brief summary.

Summary of Findings

Microwave Ovens

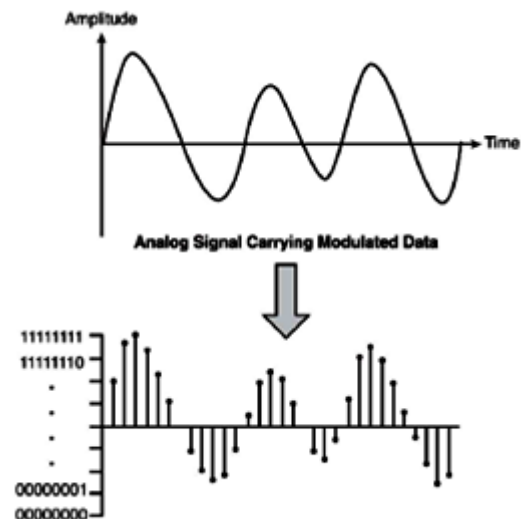

There are some natural forms of microwaves, such as those from the sun, that do not create health problems for us. We are referring in this article to human-generated microwaves, such as those used in modern technology, which we found do cause problems for people and the planet.

At the very least, heating and cooking food in a microwave oven decreases the food's nutritional value 60 to 90%. At its worst, it turns otherwise healthy components of food into carcinogens and harms the air mole-

cules that are in the oven chamber when it is on. All microwave ovens leak to one degree or another. Degeneration of human health can occur from ingesting microwaved foods as well as from being exposed to microwave radiations.

Digital Technology and Cell Phone Towers

Digital Signal Processing is a way of breaking up data so that massive amounts of it can be sent through a cable. Before digital signals were used to transfer electronic information, analogue signals were used. When one looks at a comparison of the waves formed by the two, as shown in the curved line in the image below, the analogue is rounded and wavy; digital, illustrated with straight lines in the chart below, is sharp and jagged. In

addition to other problems discussed later in this article, when digital signals go through our bodies, the jagged nature of their pulses is more irritating to our nervous systems than signaling processes formerly used by the general public.

Cell phone towers use digital signals as well as microwaves to transmit all the information we send and receive on cell phones. Our dowsing found that both the frequency and wave form of microwaves, and the digital signals they carry, cause health problems in human beings.

Cell Phones and WiFi

WiFi stands for Wireless Fidelity. It is a brand name, and there are other brands, but we'll use the term WiFi in this article for all wireless transmissions.

WiFi transmissions are sent over the airwaves via devices that are called access points. Cordless landline phones, baby monitors, remote internet connections (such as Apple's Airport), and remote controls are examples

of modern devices that work cordlessly via WiFi signals being shot through the air. When you have WiFi in your house, it is like having a small cell phone tower in your home.

Cell phone messages are transmitted through the air via cell phone towers. When a cell phone is on and held to the head, it is like placing a tiny, low-powered, un-walled, activated microwave oven there; plus, the user is getting zapped by digital signals. All of this is potentially bad for human health. We recommend that cell phone users use a headset so that the phone is not placed directly to the head and, further, that they place the phone itself at least two centimeters away from their body when it is in use.

More Details

Microwave Ovens

Heat in a microwave oven is caused by molecular friction which tears apart and deforms cells and molecules. These mutations occur not only in the food and water inside the oven, but also in the air in the oven chamber; and every time a person opens the door of a microwave oven after heating food in it, mutated air molecules are released into the air that we breathe. We found that it is in the best interests of all concerned to stop using microwave ovens, period.

Our dowsing found that emissions of harmful electromagnetic radiations continue for two and a half hours after a microwave is used and then turned off, even if it is unplugged after use.

Some physical problems, that can be caused by eating microwaved foods and from being frequently exposed to microwave, are: changes in the blood; cancer; leukocytosis; breakdown in systems of digestion and elimination; deterioration of the life-energy field (aura); degeneration of the nervous system; brain damage; immune system deficiencies; loss of hormonal balance; and brainwave and psychological disturbances, includ-

ing, loss of memory and ability to concentrate, decreased intellect, emotional instability, sleep disturbances, and passivity.

In addition to the above problems, the psycho-neural receptor components in the brain become more vulnerable to microwave transmissions that can artificially affect our behavior - commonly called 'brainwashing', or what we might call e-brainwashing. DDGD found in 2003 that scientists have indeed used modern technology to send mood-altering signals via cell phones and the Internet.

If you'd like more information, our dowsing found all of the following articles to be accurate: <http://curezone.com/foods/microwave-oven-risk.asp>.

Digital Signals and Cell Phone Towers

When a person is ill-affected by digital signals, they are harmed through disruption of the electrical circuitry of the brain and nervous system. This electronically generated signal conflicts with and disturbs the natural electrical balance of the body. Digital signals mix with the natural electrical signals in our bodies, creating a kind of crosstalk that is confusing and difficult for us to deal with mentally and physically. Digital signals also disturb the electrical 'nervous system' of the planet.

Regarding cell-phone towers, the farther away one is from a cell-phone tower, the less likely its emissions will cause bad health effects; but as soon as a person puts a cell phone to their head, they're getting zapped full force.

An abbreviated list of physical problems caused by exposure to digital signals and emissions from cell phone towers includes: increased cancer risk in many forms, especially breast cancer; and unhealthy changes in blood levels of serotonin and melatonin, causing defects in brain messaging, alterations of mood, sleep irregularities, immune system problems, headaches, poor memory, mental excitation, confusion, anxiety, depression, appetite disturbance, and listlessness.

Cell Phones and WiFi

Cell-phone radiations can cause benign and malignant tumors in the area of the head where the phone is held.

Individuals with a weak or diseased heart are advised to never use a cell phone and should not work or live in an environment that has WiFi.

Regarding WiFi, our most interesting dowsing finding related to a phenomenon called 'modulation.' Many scientists have focused on the possible problems related to what is called the thermal effect of microwaves - the fact that microwaves cause heat and can, thus, cause burns. This we know is true. Beyond that, there are non-thermal effects caused by microwave frequencies.

When you add Digital Signal Processing to the microwave carrier wave, as WiFi does, the combination morphs into an additional signal, an additional frequency, known as modulation. It is this modulation that induces the widest variety of biological reactions. From my research, however, I gleaned that scientists who accept the existence of modulation and have documented its effects still don't know why it causes so many health problems. We decided to investigate that unknown in our dowsing, and we found the following.

To understand how cell phones and WiFi work with digital signals, let's take an example of your sending a simple text email message to a friend, either by phone or by computer. When you hit the 'Send' button, the data in the email that you recognize as words and numbers is broken up into data fragments, and each fragment of information is in turn translated into a numerical (digital) computer code which is sent through the

air for WiFi, the telephone lines if using a modem, or cable if you have a cable system.

When it reaches your friend's receiving device (computer or phone), the device reassembles the data into the recognizable form of words and numbers that your friend can read. The same happens with music, images, and movies that are sent through these devices. What we found is that, even though human eyes and ears don't pick it up, our internal electrical and nervous systems register and react to this massive cacophony of electro-noise that is whizzing back and forth. WiFi, cell phones, and cell-phone towers are the biggest offenders because the data is moving through the air and, consequently, 'through us' if we are in range.

Our bodies are made to interpret whatever information they are exposed to. Even though we cannot see or hear it, this fragmented, numerically codified mass of data passes through our energy fields, and our brains and nervous systems try to make sense of it. The combination of the huge volume of data, the disorienting fragmentation of the data, the mix of disparate types of information, and the fact that it is in a code that is foreign to us, creates an overload that damages - or "burns out" - our nervous systems over time.

Imagine being in a closed room where three different movies and ten different types of music are playing, a hundred people are talking over one another, all in a foreign language, with all of this stimuli broken up into fragments that come in, not in sequence, but in a jumbled mass and at a loud volume. This is an example of the kind of challenge your nervous system deals with when hit by a WiFi stream.

Some health problems related to both cell-phone use and WiFi exposure include cancer, brain aging, brain damage, leakage through the brain barrier, early-onset Alzheimer's, senility, DNA damage, sperm die-off, disruption of the body's electrical fields, heart arrhythmias, heart stoppage, and exhaustion and fatigue.

In addition, the normal WiFi we find in the modern home can cause headaches, difficulty breathing, and blurred vision. Children suffer a higher risk factor from cell phone and WiFi emissions than adults.

The next section suggests various methods of protection, but the modulation feature warrants a more detailed explanation here. When given more than one thing to focus on, under normal circumstances, the human nervous system will most readily accept the stimuli that it is most familiar with, or what is dominant or most demanding in its environment. Just as our eyes can be damaged by too much light and our ears can be damaged by noises that are too loud, our nervous systems can be damaged by the effects of WiFi and cell-phones. However, if a human being adopts protective measures and healthy habits that prevent further damage to their nervous systems, it is possible to recover to good health.

We found, universally, that listening to classical music such as Mozart, Bach, Beethoven, etc., overrides the ill-effects of this electronically relayed data. Different people can experience the same “cure” from different types of music; but classical music kept coming up in our dowsing with an unanimous yes as 98% or higher protection for everyone who would otherwise suffer from ‘electro-data overload’. We found that most people who are exposed to WiFi signals will still absorb 95% of the modulations, even if they’re listening to music in general or have some other distracting stimuli around them. There is something, however, about classical music that grabs the nervous system’s attention and holds it in a positive way, so that the modulated digital waves are ignored by our internal senses and, thus, become harmless.

These invading energies are subtle energies, and we can cure ourselves of the effects of this electro-data overload by clearing the chatter from our minds, and balancing and fortifying our spiritual energies with meditation, for example. However, without some kind of protection and cleansing rituals, these energies will cause physical and mental stresses on those of us who have more exposure than our physical, mental, and spiritual faculties can overcome.

Some health problems caused by the modulation phenomenon are Alzheimers, brain damage, leakage into the brain cavity, Parkinsons, disruption of the electrical system in our bodies, heart arrhythmias and other heart problems, and imbalance between the right- and left-brain hemispheres.

If you'd like more details, our dowsing found all of the information in the following article to be accurate: February 2010 GQ Magazine, "Warning: Your Cell Phone May be Hazardous to Your Health"; <http://www.gq.com/cars-gear/gear-and-gadgets/201002/warning-cell-phone-radiation>.

Helpful Methods of Clearing and Protection

The effects of the signals and radiations covered in this article are cumulative in the body. We advise that everyone take an inventory of all of their exposure to the systems and devices. We found that keeping exposure low, using effective protective devices, and using the cleansing and clearing techniques described below, can help prevent health problems to ourselves as individuals and assist our bodies in reversing damage caused by modern technology.

We found, however, that we as individuals can have little effect in preventing or reversing the deformation of air molecules by microwaves or the disruption of Mother's Earth's electrical/nervous system caused by the widespread use of these technologies.

All of the healing and protective modalities listed below came through our dowsing as effective for most people most of the time. We encourage those of you with dowsing skills to dowse what is the best way for you.

1. Psychic and Spiritual Protection. DDGD found that some individuals can revitalize microwaved food and can avoid the bad effects of the new electromagnetic radiations through self-applied psychic shields and prayers.

2. Magnet Therapy. Use of magnet therapy can rebalance a body that is disturbed by microwaves.

3. Protective Devices. The devices in this section are those that individuals in our group had experience with and had brought to the meetings to have tested through dowsing.

- Q-Link, Rejuveniser, and Bioshield. We found that wearing these will protect the wearer from the ill effects of the new technologies, but wearing them for a long period of time (several hours) can disturb the autonomic nervous system within the body. We suggest that you dowse how they will affect you personally. They are not self-cleaning, so they can accumulate negative energies and need to be cleared periodically (see clearing section below) to remain effective.

- Energy Signatures These work like prayers that are being continually sent into the divine consciousness. They are available as jewelry or cards to be worn or carried on the body for personal protection from harmful man made energies anywhere we travel, but you will be just as protected if you print out a copy of those shown above.

Carry 'Auspicious Journey' in your pocket or put it anywhere within three feet of your body.

Affix 'Divine Protection' onto devices like those that carry WiFi, digital

signals, or microwaves. It has the added benefit of implanting healing energies into the energy streams sent out by our modern technology devices.

The DDGD group found that they are self-cleaning. They soften the effects of the modulation frequency, transforming the harmful elements into a soft cloudlike mass that actually soothes the nervous system rather than jarring it.

4.Cleansing Baths. Soaking in an Epsom salts bath for 20 minutes a day, a minimum of six times a week is an excellent way to rebalance the body's electrical system, to leach out toxins in the body, and to assist in reversing problems related to all EMR exposure. Adding hydrogen peroxide and/or baking soda strengthens the curative effects of the Epsom salts. My personal recipe is: 1 cup of Epsom salts, one cup of hydrogen peroxide, one cup of baking soda to a full bathtub of warm or hot water. Many people need two cups of Epsom salts per bath for it to work well. Frequent bathing in Epsom salts can cause loose bowels; so I'd recommend starting with two cups, and lessen the amount if need be. Salts can dry the skin; so some people rinse off in the shower with plain water after the bath.

5.Plants That Help Us Clear The Air. We did not as a group dowse on plants, but I personally add the following information about plants that are the most helpful at clearing the ill-effects of microwaves and that can nullify the adverse effects of digital signals:

- Dracaena "Janet Craig" (*Dracaena deremensis* "Janet Craig")
- Dracaena "Warneckeii" (*Dracaena deremensis* "Warneckeii")
- Jade plants; Money plants (*Crassula ovata*)
- Mother-in-law's tongue; Snake plant (*Sansevieria Trifasciata Laurentii*)
- Peace lily; Mauna Loa (*Spathiphyllum* Sp.)
- Philodendron; Elephant ear; Spade leaf (*Philodendron domesticum* or *Philodendron hastatum*) *Syngonium*; Arrowhead vine; White butterfly; Goosefoot (*Syngonium podophyllum*)

- Tulip (*Tulipa gesneriana*)

Curative-Device Clearing Methods

Here are a couple of ways to clear devices that are not self-cleaning.

- Shake It Out. My brother Tim's favorite method of clearing devices is to hold the device firmly in one hand, and with firm intention to clear the device, give the device three sharp shakes.
- Tap-Water Method. This method works great for clearing the person as well as the device. Go to a metal faucet. Turn on the cold water. While holding the device with the four fingers of one hand, place the thumb of the same hand on the metal faucet.

Position the hand so that the thumb is touching the metal up top while the fingers are held downward, with the water running over the fingers and the device. Do this for about 20 seconds. I like to hold an L-rod in the other hand and ask that I be given an affirmative when the clearing is finished. To cleanse just yourself of negative energies, do the same thing, but without a device in your hand.

If you focus on the process, you can actually feel the “dirty” energies draining out of your body as the water runs over your fingers.

And with that, I wish you all the best of health.

Disclaimer:

The people listed above are known to be reputable dowzers. However the Dowzers Society cannot accept any responsibility for their activities.

Seminars

Alanna Moore's seminar had to be cancelled due to unforeseen circumstances, and we apologise for this. Refunds have been mailed out.

Guy Kramhoft is working on putting to paper his recent discoveries and he is eager to share them with us. However his workload has not allowed him the time to prepare for it adequately. He assured me that he would be in a better position to do so next year. Refunds have been mailed out.

Seminar coordinator

We are currently looking for a new seminar coordinator. This is a very interesting position and you get to attend all the seminars for free.

If you are interested in this position, please contact the Secretary on 02 9398 8132. We have a job description and a manual with some simple procedures. You will need a computer, access to emails and knowl-

A Master Dowser's Departure

Walt Woods, the author of 'A Letter to Robin' has left us to join the Great Dowser in the Sky. His manuals, written in a simple and clear style have helped many on this path, including myself. I attended one of his classes quite a few years ago at the ASD convention in Vermont, and I was very impressed with his ability to teach clearly, his knowledge, dowsing ability and his kindness.

The extraordinary knowledge freely shared by Walt Woods will remain with me, and all of his students, forever.

God Bless You Walt, you did a magnificent job to help so many to see the Light and the true path to follow in life.

François

Speaker for October 16th, 2011

- Megan Heazlewood -

Advanced Crop Circles

The crop circle phenomenon is a confounding enigma which really challenges our beliefs about the nature of reality.

The history of the phenomenon reveals an evolving complexity, and I maintain, an evolving communication from a higher intelligence which appears to be interactive with human consciousness.

The history of the hoaxing of crop circles reveals a well organised debunking campaign. My upcoming talk will be about some incredible communications via the crop circle makers, and the video evidence of anomolus lights, UFO`s and military activity associated with the crop circle phenomenon.

I will be showing what Nassim Harramein (a well respected and award winning quantum physicist) and what Richard Hoagland (ex NASA Personel) have to say about Crop Circles; and show video evidence that we are indeed in a dimensional shift.

This is a dimentional shift which all ancient traditions and religions assert will happen in the times we are in.

Date of Meetings

Third Sunday of every month, except December (2nd Sunday)
